Thread: [Problem with DarkcometRAT](#)

bengalzam - May 2, 2015, 3:28 am

Well I DL'd DarkcometRAT and from laptop I downloaded my RAT file(everything works fine),and when I turn on my laptop it shows do I want to run MSCDS.exe (virus name) and 90% will just click cancel.Anybody know how to solve this problem to automatically run the virus at startup ?

SIM-2212192 - May 2, 2015, 4:00 am

Well, where'd you download it from? Don't get your shit of YT. Stop by the whitehat section and ask them to clean your pc.

bengalzam - May 2, 2015, 4:29 am

no I downloaded it from plutonium he has TUT on how to install it,darkcomet works fine I just think there something that's need to be checked or don't no...

bengalzam - May 2, 2015, 1:46 pm

No i runned the STAB from my laptop and my Darkcomet RAT is on PC,so my laptop is "victim",and it works fine i can remote desktop and all that stuff,but when starting the laptop on startup it asks do I want to run MSDSC.exe(rat file)and if i click run then laptop appears as a "victim" on my darkcomet,but if i click cancel it doesn't show up on my darkcomet RAT .

Don't. Use. DarkComet.

Use a paid R.A.T, or any other R.A.T, just not DarkComet.

Sorry, but uh... No..

DarkComet is easily one of the best RATs out there (Free) as long as you secure yourself whilst using it.

All options are still working (Including chromium Password recovery)

DarkComet is the best RAT, and always going to be.
