Thread: [Botnet files \(CLEAN\) ? how to know if i bought good botnet files](#)

botnethelp - May 3, 2015, 9:16 am

hi i got a question about botnet files how do i know if they clean?. if i scanned them would the Client Builder come up as a threat ? or not? would the botnet files be totaly clean like no viruses comming up at all ? untill i made my infection file ?? please answer

ThePacketBaron - May 3, 2015, 9:36 am

Yes they would most probably come up as a threat because they are assembling malware and therefore will to some extent have some sort of malicious code inside them as they build your server. What you could do it create a virtual machine and just run everything inside. If you do this then it doesn't even matter if you are infected.

ok i just wanted to make sure someone from this forum has infected me before

advscan - May 3, 2015, 1:16 pm

best deal is to recover ur pc or formatting then everything will be gone :D
