Thread: [Access to any blocked website on your school](#)

SlopeQ - May 3, 2015, 9:51 am

Hi, my name is SlopeQ and stuffs like that you are not interested about. But I am here to learn a such stupid and easy trick for you guys on your schools network to view blocked pages. This method works even if the blocking of websites on your schools network is at a package level(As mine).

So what you basically need is full access to all kinds of google resources such as [translate.google.com](#).

When you finally get there after this long link([translate.google.com](#)) you will see the normal useless form to fill in to see how bad grammar google has when you translate, As I have.

So, the link you can't access too will be pasted in the translate form as I talked about before, you know that crappy little thing.

The last step, click translate and google will show you the full live version of the page! Notice, google is such a kind friend so he probably on every page you access too will translate it - FOR FREE! ?

And yes this is just a little trick to simply smash your hand into your technicians face, and laugh of course...

Enjoy!

CULTURE - May 3, 2015, 2:36 pm

Ill see if this works when I go to school tomorrow

Meow - May 3, 2015, 2:37 pm

Will test this tomorrow, hopefully it works!

Ellie Goulding - May 3, 2015, 2:38 pm

Woah, sounds interesting, may try it out, thanks.

EDIT: I tried doing this at home on my personal computer and this keeps popping up.

(I used [translate.google.ca](#) as I'm from Canada)

Anyways, I put the link on the left-side box, hit translate then this pops up.

<http://prntscr.com/717is7>

I'll suggest you to use another country! Try google.dk or something like that and it should work, or just click show original version! ?

ja0117 - May 4, 2015, 11:46 am

Thanks mate ill try this on school tomorrow!

Constabulary - May 4, 2015, 11:49 am

i got a month ban from the school net for using so many proxies and crashing the network LMAO

any other ways too bypass websites

This aint a proxy, this is just google helping you a bit! :) Try using this method. No need for proxies at schools anymore with this ?

AnnihilationLee - May 5, 2015, 4:00 pm

I might try it out! Thanks.

HxDLORD - May 6, 2015, 6:37 am

I changed my DNS connection setting on my ipad to 8.8.4.4 and instantly worked :)

This looks like it could work also. I may try it today

TheProXimity - May 6, 2015, 12:18 pm

The way I did this was picking a different country when I typed in the domain and using english for the translation and it worked! Thanks. (My School's Thing uses impero and I want to know how to gain access to that :))

LUOIdRentA - May 7, 2015, 1:14 pm

I already knew about this actually, my friend figured it out a while back. I have another method though, I made just a simple web browser with proxy functionality in it, as all web proxies are banned at my school. Everything is filtered, but I bypassed it lol.

I set myself up a VPN to connect via tcp 80 an that will bypass almost any filter.

Yes there's of course alot of other methods. A think you can do with cmd is route /add to find a way through

FFY00 Loko - May 8, 2015, 5:49 am

Its easier use a VPN.

If the school has a good security as mine, VPN wont work. Proxife might work tho.

Krat0s2 - May 9, 2015, 10:46 am

Hehe , now that is what I call an original idea. Personally I would have never thought of using Google Translator lol. Now that you mention this you can use the method on even more unknown sites. For example, anyone uses PTC, Paidverts? You have an option to advertise a site and you have to wait a few minutes to verify the site while it displays lol heh.

Another option would be to chance the DNS in the hosts file. Like setting it up for a web proxy so you can access it and then surf whatever you want.

Thanks for the share.

Cheers.

Cryptic™ - May 9, 2015, 10:47 am

Or, if you know a bit about Linux you can setup an NGINX reverse proxy to any site you want.

Thanks for the tip. What I wanted to create here was a supereasy tutorial for beginners who don't know anything about VPNs, Proxies and different kinds of DNS hosting. Glad you liked it tho.

Cheers ?

Peloché - May 10, 2015, 6:02 am

Thanks guy ill try this on school tomorrow :)

Hinch - May 10, 2015, 6:55 am

school blocked google translate and blocks keywords using a rat called impero
