Thread: [DarkComet RAT works locally but not with outside connections](#)

SuperRocketBoy - May 4, 2015, 4:40 am

Hey guys I just installed DarkComet, made dns using no-ip and installed no-ip tool, opened port, allowed inbound and outbound connections, added ports to listen but when I try to create RAT exe with IP/DNS 127.0.01 it works properly but when I put the dns up there it doesnt work. I tried Duck Dns too but slaves doesnt come up.

ANY SOLUTION?

BahNahNah - May 4, 2015, 4:41 am

Dont use NO-IP. use duckdns or freedns.

Also, if you cant get outside connections, make sure your ports are forwarded.

Syphonite - May 4, 2015, 4:43 am

No-ip has been monitored by microsoft for a long time. It's risky to use it.

SuperRocketBoy - May 4, 2015, 5:03 am

I used DuckDns still it doesnt work. The process keeps running in the task manager but slave doesnt show up :(

mackiavelli - May 4, 2015, 5:05 am

Did you tried check port on canyouseeme.org ?

Try this site with DC rumming. For me when I shutdown DC canyouseeme site doesn't by able to check my ports correctly. Only with running DC it works and shows that my listening port are open.

SuperRocketBoy - May 4, 2015, 5:09 am

canyouseeme.org shows success with DarkComet only. Without it cannot see.
