Thread: [Youtube Video Search/Downloader](#)

Drizzy?? - May 4, 2015, 8:31 pm

So I just found this on an old flash drive, tested it out and still works. Search a song name and it will bring up four relevant results. Click on a result to listen to it or click the "Download" button. I made no attempt to clean this up so expect horrid and extremely messy code (this is from a few years ago).

Screenshots

Download

Don't ask why it comes up as a virus, cause I'm not sure.

Doesn't look bad at all ;) I also made something like this a few years back (mine used: KeepVid and/or Youtube-Mp3) .. I'm sure this will help out some people on here ;) Thanks for the share!
