Thread: [PHP/HTML Source multiple DDoS apis](#)

xLizard - May 5, 2015, 11:26 am

Hey could anyone send me a php script with 3 html forms (ip,port,time) and I want it to be able to use multiple apis.

The apis look like:

<http://api.com/send.php?key=&host=&port=&time=>

Would be nice if you could help me :)

Alex™ - May 5, 2015, 11:43 am

Put them all in an array and then just do foreach(\$apis as \$api).

Are you using a shell or a actual api?

I can help you with this.

newQuery - May 5, 2015, 3:06 pm

I pm'ed you about it

Sent you a little bit of code gimme some more details pls

I can get one script made for you, it will look fancypancy.

PM me :)
