Thread: [Any Better?](#)

Omniscient - May 7, 2015, 2:12 am

Please let me know if the cross-login issue is any better. If you still at this moment see that you're logged into another users accounts please reply and LMK.

We've changed our serving to add another layer of DDOS protection. It's caused a problem with double cache and incorrect session handling. I'm working on it as best I can.

Tomorrow I'll post more details on the issue.

Thank you.

DevNet - May 7, 2015, 2:13 am

I have not yet experienced this problem, glad to see you're adding protection though as I have experienced some downtime lately.

Aiba - May 7, 2015, 2:14 am

Site seems to be faster and smoother for me.

Thanks

MrOrang - May 7, 2015, 2:15 am

Only had it occur once, when I changed my password and re-authenticated it had stopped.

BLURRYF?CE - May 7, 2015, 2:20 am

It didn't happen to me, but it happened to quite a few people I talk to, and I tried to send a PM with their postkey, but fortunately, I got an authorization code mismatch error.

Anyhow, I re-logged as a security precaution.

Site seems to be loading marginally slower for me, although almost unnoticeable and hopefully this will greatly help mitigate the DDoS attacks.

Edit: Now it's loading faster than usual, maybe it's some monkey business with my cache or something entirely else.

Edit #2: Yes, definitively better, never been this good before!

Sunlight - May 7, 2015, 2:20 am

It's not doing it for me anymore, will edit my post if it happens again.

Well done for fixing it. ^^

Ahri????? - May 7, 2015, 2:21 am

Never managed to experience that great moment when you were someone else, else the site is running error free so far.

Omniscient - May 7, 2015, 2:42 am

Working out the kinks. It's faster for now. We'll see how long that lasts.

Effexion - May 7, 2015, 2:44 am

I don't think it's right across the boards as mine has been fine all day (UK). Maybe that will come as some consolation.

Canonsx130 - May 7, 2015, 2:44 am

Much better now. Though loading the main page first gives me a "You are being redirected" message. But yeah it's fine. No account glitches for the past 15 mins,.

Skorp - May 7, 2015, 3:02 am

Comparing the website's function to the last hour or so, this is 100% better than before. The site runs much more smoother and efficient.

Nice work. :)

Gt403cyl - May 7, 2015, 3:22 am

So far it's been better for me I had to request a new password to login then change it again but now it seems to be better anyways.

?lex - May 7, 2015, 4:41 am

It's been way better. I believe the issue has been resolved.

Orgy - May 7, 2015, 4:52 am

Whenever I try to send a PM on my phone or in the browser, I get a blocked page

Same thing happened to me whenever I tried making a post ?

Stopped now though

Harbo5 - May 7, 2015, 5:44 am

<http://hackforums.net> appears to be totally broken, for me atleast.

Tony Stark - May 7, 2015, 5:49 am

No issues on my end. Posting and browsing smoothly currently. Lets hope it stays this way.

Like I said earlier, I just cleared my cache/cookies and I stopped encountering all the issues people were facing.

Hopefully you have it all resolved soon.

Underd?g - May 7, 2015, 5:51 am

(May 7, 2015 05:44 AM)Harbo5 Wrote: [\[CITE\] http://hackforums.net](#) appears to be totally broken, for me atleast.

Totally broken for me as well.

Learner Boy - May 7, 2015, 6:05 am

After all of this has happened and resolved. Do we need to change the passwords for our accounts?

Apparently because we logged in to a different person's account due to the error, the cookies as well may be saved to the browser.

What do you guys think?

Limited Edition - May 7, 2015, 6:33 am

It happened to me the two times I told you about but since then it's been fine.

I have a ~1mbps connection and I notice a huge difference in the loading time, it's much faster now.
?

Truth - May 7, 2015, 6:49 am

NSFW needs its own theme I am tired of switching back and forth when someone sends me a URL using hackforums.net

But www works nsfw down

REKTED BY LOLI GODS - May 7, 2015, 6:53 am

I have no had this issue yet thank god but I hope you get this fixed man. Im glad that HF is back up it's love and lyfe x3 did you find out who was causing the attack?

Adding on to what I said do you think it's recommended for us to change our password by any chance are we are risk? Because of the cross caching...

Burritos - May 7, 2015, 7:11 am

I didn't seem to have any problems of this sort but I hope you figured it all out, omni.

Vanilja - May 7, 2015, 7:19 am

Nothing else see. to be wrong right now except that hackforums.net is not working.

G????????f????s? - May 7, 2015, 7:23 am

Pretty fancy. Now people won't be taking HF off as easy. Thanks omni

Prince™ - May 7, 2015, 7:23 am

Didn't experience any issue whatsoever since this thread has been posted.

It's normal for me.

webdev77 - May 7, 2015, 7:26 am

All appears normal on my end. Near instant page loading times at the moment, which is fantastic.

Telstra - May 7, 2015, 7:27 am

Seems all good for me Omni and has been for the past few hours.

Jet??? - May 7, 2015, 7:41 am

Everything's working fine on my end. Haven't had any issues all day.

PoisonKnife - May 7, 2015, 7:51 am

It's working for me again.

Great job fixing it :)

ntoskrnl.exe - May 7, 2015, 7:52 am

Happens to me too.

Spoiler ([Click to View](#)) Just kidding, it's fixed and working good now. You only need to fix the nsfw subdomain. ?

?LI?? - May 7, 2015, 7:56 am

I have yet to experience this!

It's working perfectly fine on my End.

Milk™ - May 7, 2015, 7:57 am

It's not doing this for me anymore, will PM you if it does.

'An0ny - May 7, 2015, 8:14 am

I've had no issues here my self, seems like the sucuric helps against cf-bypass :)

Quiet curious how you have two, or maybe even more reverse proxies and still manage to get the real IP.. impressive.

void account - May 7, 2015, 8:15 am

I've been having this problem because I frequently use 2-3 computers daily to log into HF. Other than that, everything runs smoothly once I clear cache/etc.

MrOrang - May 7, 2015, 9:33 am

I was somehow logged out, logged back in and checked logins but no weird ip's.

Glad this is resolved(also have 2fa & country lock).

Omniscient - *May 7, 2015, 9:38 am*

I'll work on NSFW. See what I can do.

Cooligan - *May 7, 2015, 9:46 am*

Everything seems to be working fine for me now, as most other people have said load times are great.

Repeat - *May 7, 2015, 9:47 am*

I am no longer being logged into LQ cunts accounts.
