Thread: [White Pages](#)

Omniscient - May 7, 2015, 10:01 am

Anyone else getting random white pages? When I refresh page loads but I have gotten more than a few times a blank page.

Coton Pker - May 7, 2015, 10:01 am

nope, smooth as butter for me still.

Trust - May 7, 2015, 10:01 am

I haven't yet, but I'll let you know.

Update - May 7, 2015, 10:02 am

This has not happened to me yet, your fukin up omni.

Reval - May 7, 2015, 10:02 am

No.

Everything is working fine on my part.

Vandie - May 7, 2015, 10:03 am

Nope, Don't think I've go this yet...

Roger Waters - May 7, 2015, 10:03 am

I got these a few minutes ago, but I waited a few minutes and everything is back to normal.

.Reef - May 7, 2015, 10:03 am

Nope on mobile all is fine for me.

Sam Winchester - May 7, 2015, 10:08 am

Everything seems to be alright for now, at least for me. I did get a Cloudflare error (IP prohibited or something) earlier today though.

ze-slade - May 7, 2015, 10:11 am

Are you referring to when you refresh the page or click on a thread it shows a white page for a second and then goes back to normal, then yes.

BeNT- - May 7, 2015, 10:13 am

Nope haven't experienced this one here either, will update post if I do.

Payne - May 7, 2015, 10:13 am

Yup, happens to me aswell, takes only 2 seconds to the white page disappears though, so no problem.

futana - May 7, 2015, 10:14 am

(May 7, 2015 10:13 AM)Payne Wrote: [\[CITE\]](#) Yup, happens to me aswell, takes only 2 seconds to the white page disappears though, so no problem.

It takes less than a second for mine to disappear.

Dean Winchester? - May 7, 2015, 10:14 am

Got them a couple of times (maybe does it for a minute or two) but right now it's been running smoothly for the past ~20 minutes

Araxxor - May 7, 2015, 10:16 am

I get a 503 error every now and then. Kinda uncomfortable, that's my area code...

Abraham Lincoln - May 7, 2015, 10:18 am

I got a white page when I opened up the first page, but haven't seen it since.

Omniscient - May 7, 2015, 10:19 am

(May 7, 2015 10:11 AM)ze-slade Wrote: [\[CITE\]](#) Are you referring to when you refresh the page or click on a thread it shows a white page for a second and then goes back to normal, then yes. That's basically it. Loads a white page. I hit refresh and page loads. Probably just how Sucuri works (or doesn't work).

Araxxor - May 7, 2015, 10:28 am

(May 7, 2015 10:26 AM)xadamxk Wrote: [\[CITE\]](#) Now that you mention it, I'm having that issue as well.

I just thought it was due to my internet.

It's quite the annoying lag time even though it's hardly noticeable.

?Average - May 7, 2015, 10:29 am

Sorry i can barely use hf right now, this is happening.

<https://gyazo.com/32b3625e87a56799ed39b51fe016d59d>

Might just be me tho.

G???????f????s? - May 7, 2015, 10:32 am

I've definitely gotten a couple. I'm on mobile and 4G LTE, that may very well be why. A quick refresh usually fixes it, mind explaining why to the curious? <3

M.4201 - May 7, 2015, 10:32 am

I think it's just you, have you tried using a different browser?

Or clearing your browsers cache and trying again.

OT: I've had it a few times, isn't it something with the cloudflare thingy or whatever is used to check browsers?

?Average - May 7, 2015, 10:34 am

Cleared cache, seems to be working now thanks adam and M.4201.

Alex - May 7, 2015, 10:44 am

I have the same problem, random white pages.

Omniscient - May 7, 2015, 11:14 am

I've made adjustments to the setup at Sucuri. Hopefully this will get resolved. It's super annoying.

Captain Steve Rogers - May 7, 2015, 11:14 am

Nah no white page or any issue, site is working great now!

Raz3d - May 7, 2015, 11:17 am

Had em a couple of times, but seems to be fixed for now. ?

Redwall - May 7, 2015, 11:20 am

Last night, when I loaded up HF it took me to a proxy website.
and then another time it said that my IP was blocked.

ze-slade - May 7, 2015, 11:33 am

Just had this error for a good minute or so <http://prntscr.com/72n5dv>

Happeh - May 7, 2015, 1:33 pm

Not getting white pages but more a flash of white as mentioned [here](#).

Starting to burn my eyes or give me epilepsy... one or the other.

Seer - May 7, 2015, 1:35 pm

I haven't experienced any white loading pages while on mobile, haven't tried my PC yet.

'An0ny - May 7, 2015, 1:37 pm

Well, if you mean 'Redirecting' delay yes.

If i close the browser and go on HF, it gives me a white page but it redirects. Which is the new protection your using, storing cookie via Javascript.

+One - May 7, 2015, 1:55 pm

Nope, never experienced any white pages, and I've been using HF on multiple and different devices.

King Cairo - May 7, 2015, 1:57 pm

Got them when I was in school earlier today in class, but now anymore since I'm at home.

Tiszy - May 7, 2015, 2:11 pm

Havent read through the thread before I've posted, just saying.

Anyways, I think HF has been down many times, and maybe you get a white page instead of HF down page?

Jake Miller - May 7, 2015, 2:12 pm

From my PC HF runs smoothly, from my phone it tends to fuck up alot.

Dean Winchester? - May 7, 2015, 2:22 pm

whenever my page goes white for a second the tab changes into "redirecting to" so it probably has something to do with that

Omniscient - May 7, 2015, 2:26 pm

I believe I've found the cause. That's their javascript check page and my browser (Opera) doesn't solve it fast enough.

Probable the same for some mobile users too.

So at least I know what it is. I'm moving away from Opera anyways. Had enough of their bullshit too.
