Thread: [Stresser Partner \[Need Server Control\] - Serious Inquiries](#)

AltKev - May 7, 2015, 10:35 pm

hello all,

i am looking to begin a stresser, and need a partner who know how to manage the servers and scripts.

i can handle everything else, and may need a support staff in the future.

serious inquiries only, pm please.

willing to spend a great amount and need someone who will too, i want this to be a successful project.

thanks.

?enpai - May 7, 2015, 11:11 pm

I am a programmer (scripter in fact, my language of choice is Python), but I have knowledge in Bash, PHP, and MySQL. In addition, I am very good with Apache configuration (setting up a secure web server). Because I am new, I will work for free for awhile until you deem me worthy of being your partner lol.

Ex1Le - May 7, 2015, 11:15 pm

I run <http://exile-stresser.net> and looking to take on another job. I have access to a dozen private scripts, and scanners. I can run the entire backend of the website, including servers, mysql, php, and even making a custom source. Shoot me a pm, or contact me with one of these:

Skype: e.x.1.l.e

Jabber: ex1le@jabbb3r.de

Still looking for potential partners, prior experience is a great thing to have.

Will choose someone when im ready and have made my choice

Sceptor - May 8, 2015, 2:09 pm

Hit me up man I have a Dedicated Server we can use also. Not only that I have all sorts of scanners and attack scripts. I also have a Custom Source that no one else even has. I can even have extra things added to our Stresser. I can even invest in about a few weeks over \$1000.00.

?•?•? - May 8, 2015, 2:20 pm

Lol, you don't need experience to wget/winscp scripts onto a server, compile & attack.

but srsly if you need a dd0s swagmaster hmu

AltKev - May 8, 2015, 5:38 pm

I'll partner with someone who is experienced, and has maintained servers before

still looking for potential partners, need more options.

I can easily help you with setting up a stresser i can setup an api and install scripts and scan lists i have scripts for
ssdp,chargen,dns,ntp,quake,ts3,netbios,mdns,vse,dominate,mssql,snmp,gotd,xml,joomla. I can scan and refresh lists and set your stresser up to hit atleast ~20gbps. I have made 2 booters before and i made good profit sadly my host suspended me. So i would love to help you. Pm me? Thanks

Edit: I know perl, html, bits of php. Enough to make a custom script.

(May 8, 2015 05:45 PM)XPRMX Wrote: [\[CITE\]](#) netbios

Edit: I know perl, html, bits of php. Enough to make a custom script.

perl sucks

i leaked netbios

i leaked mdns

goml

and the only good methods you mentioned in that list are

chargen, dns and ntp (for udp amp methods)

ssdp sucks anal holes cus everyone is using it and lists die in literally like 1 day if you're using it on a stresser

AltKev - May 9, 2015, 7:58 am

dont bash another members application, as he isnt doing so to yours.

they state what they'd like, and so be it.

your feedback on other member's posts in this thread is irrelevant; as im looking for one thing only.

please keep applying, need more options ot choose from, thank you all.

?•?•? - May 9, 2015, 10:19 am

all im saying is you could do this by yourself lol

Monkey D. Dragon. - May 9, 2015, 10:22 am

If you ever need support staff i would like to do it.

AltKev - May 9, 2015, 9:18 pm

thanks for that, i will keep it in mind.

still looking for applicants for a partner please pm me if you're interested.
