Thread: [Help Regarding PuTTY Booter](#)

FrostByte - May 9, 2015, 4:15 am

StyleModz Wrote:

hello, so do you have a solution on creating a webpage that can run the script?

Anon Wrote:

Yes i do its called an api and i could set it up for you it could run any time of ddos as long as you/i have the script. the strongest you can use is amplification i set it all up for you if you would like.

StyleModz Wrote:

give more detail on what you will haft to do and what this will give me, and what I will need and cost. Depending if I already have it or not.

Anon Wrote:

I will have to install scripts on the server such as ssdp,ntp,chargen,dns,xsyn which will give you around 20gbps of power to hit with. The cost is just a vps server. Now for ddos you will be using amplification ddos scripts(which are ssdp,ntp,dns,chargen,quake,ts3 ect.) these scripts you "scan" lists of ips that run on that service and with the attack script you can redirect them to ips giving it an amplification boost. Keep in mind i will install this all for you and i will teach you what to do.

Can anyone tell me if this is a scam and cant I do this my own self the member that sent me this only has 1 rep, although I still won't trust him. But will the methods he described work with what I wanna go for?

Xenious - May 9, 2015, 4:53 am

He seems legit but be carefull and do not give away your server password.

If you do not trust him feel free to PM me i do free api setups, look in my signature.

?

Helped the user setup his API.

Now he removed me from skype.
