Thread: [Visual Basic plugin for Script Hook V \[Writing GTA V mods in VB\]](#)

\$lick - May 9, 2015, 3:05 pm

This is a preview, if you don't care for previews then leave.

So I was working on some mods in C++ and thought it would be faster to do it in a language that I more familiar with.

So I started creating a way to make mods in Visual Basic, I currently only have a few things in but it is working as intended.

Image of syntax [\(Click to View\)](#)

It's currently compiling to LUA using the LUA Plugin for Script Hook V (9.0) as I currently don't know how to make it run straight from VB, if anybody knows then please PM me.

Nicktron - May 9, 2015, 3:33 pm

Nice project, if you ever decide to release, I'm sure I will develop a bit.

Very nice, looks like a lot of thought and effort went into this. This is defiantly something to consider developing fully, the mod community is already getting quite large on gtamods. If this is done with the level of detail i expect from a coder like you this will be quite big indeed :)

Keep it up! :)

It will be a while before I ever get around to releasing it.

Leaving this for the to-be flame war

Spoiler [\(Click to View\)](#)

:D

:D

I don't see how there could be a flame war? What would we fight about?

Why convert VB to LUA, if you know C++ why not do something similar to the [CLR Host Plugin](#) for OBS?

It may be impossible for all i know, but if it isn't, then surely it would be easier then trying to convert one language to another, no?

Edit: Better Example - [MSDN](#)

Was waiting for this, lmao. That is what I wanted to say aswell. No need to convert to 3 different languages...

ruvimkhom12345 - May 13, 2015, 5:21 pm

Sounds awesome... I will be one of the people who will defiantly take a look at this :)
