Thread: [MSSQL Union Based Exploitation in Worse Conditions](#)[\[Tutorial\]](#)

iHacker-n00b - May 10, 2015, 12:59 pm

MSSQL Practical Second Order Exploitation Or Kinda Out of Band Exploitation(The Purpose is Same, The Trick is little different) When You are Not Able To Do Error Based Or Union Based SQL Injection and Then Comes What You Could Do Instead of Those 'Blind injections '? In Such Situations

Code <http://securityidiots.com/Web-Pentest/SQL-Injection/mssql-out-of-band-exploitation.html>

[Video: <https://www.youtube.com/watch?v=6ISqISY97t8>]

Hope You 'll Enjoy!

Neat trick that would be fairly site specific. Also this is a normal stacked query injection, nothing out of band (email, dns, etc) about it all...

WoW! Thanks For The Nice Comment! Yea Its Nothing Out of Band Though The Purpose Is The Same :P To Avoid xD Blind Injections ! :) Actually Here 2 Queries are running with Different Number of Columns :P That Causes Union Based and Even Error based a Problem .. For That We Could even Do one More thing that is :P Alter and add Column(s) to the One Of Tables Such That Both queries have Same Number of columns :) And Then Union Based Injection works.. Fine
