Thread: [Free Hosting - 3 years - Awesome](#)

\$uicide - May 10, 2015, 11:29 pm

NOT MY METHOD, original link below! All credit to lol_lol, including thread design!

also, tested and working!

whenever "I" or "Me" is used, assume they refer to the original poster linked above and linked below.

<https://hackforums.net/showthread.php?tid=4814984>

HELLO, I found an exploit for a website to get their paid hosting service for 0\$! it isn't that great but its cool. ?

Tools Needed:

Internet

Firefox Web Browser

Tamper Data (it's an addon for firefox)

Steps:

Step #1 Open up Firefox, you need to install the Tamper Data addon, search Tamper Data on google and install it then restart firefox it says to do so.

Step #2 Go to the website were going to this exploit on which is cpanel.hostinger.co.uk. Hey I tried this on a few other webhosts and it didn't work so not all webhosts will work using this exploit.

Step #3 Once logged in the cpanel hover over on Hosting in the red TAB Click + New Account.

Step #4 Now choose on the paid choices Premium, Business.

Step #5 Okay were kinda almost done Its now time to open the tool Tamper Data in firefox on the top left hand corner It says tools and find and click Tamper Data HEHEHE ? IT should open up a program on firefox don't touch it yet.

Step #6 Now were here... click on any billing cycle choose any :)

now its time to click start tamper on the program then click continue on the website it pops up click Tamper.

Step #7 Find period erase everything in the field then click okay. Keep clicking submit until you get to the next page then click stop Tamper in the program we don't need it anymore.

Step #8 FINAL STEP It will say invoice not found then reload the page click the red TAB on top again it will have your paid webhosting that we got for free. ?

So that's how you do it! I hope this helps.?

hosting is pretty stupid. The angry sysadmin will rummage through your logs and files looking for ways to get payback. Don't store anything sensitive using this method.

Grim - May 10, 2015, 11:31 pm

why is there a need to re-post it if you don't mind me asking?

\$uicide - May 10, 2015, 11:33 pm

(May 10, 2015 11:31 PM)?Sith Lord Wrote: [\[CITE\]](#) why is there a need to re-post it if you don't mind me asking?

because look at the original thread, no one is looking at it at all! not a single post or anything, and this guy found an amazing opportunity for free, and amazing hosting. If felt that he would get more of an outcome from it being posted here. hence why i gave him full credit. If he asks for me to remove the thread, I will.

Guarded Merchant™ - May 10, 2015, 11:40 pm

Sorry bud, Maybe others weren't interested. Also would be nice if you gave credit to the original owner. Otherwise good luck with this! And thanks for sharing!

\$uicide - May 10, 2015, 11:46 pm

I gave credit in big bold text, including a link to his thread and his username. :P right at the top of the thread, made it a priority since it was not my method.

yea, that kinda goes without saying. not against the forum rules to post this, and i kinda figured most people know what they are doing. Posted your warning in the thread above, thanks for the input.

Kr?nus - May 11, 2015, 2:52 am

I was wondering if this also works with VPS from Hostinger

Yurt - May 11, 2015, 3:57 am

I don't think this actually works anymore :/

sql_93 - May 11, 2015, 4:27 am

Please add video how for this not work for me :(

Lyrarei - May 11, 2015, 6:30 am

I manage to make mine work

But i'm too afraid to store anything on it.
But dayum hostinger servers are fast as fuck.

\$uicide - May 11, 2015, 6:50 am

(May 11, 2015 02:52 AM)Kr?nus Wrote: [\[CITE\]](#) I was wondering if this also works with VPS from Hostinger
i tried, doesnt work. i cant get the field to come up where i can tamper with the price. :/ if u get it working, hit me up.

(May 11, 2015 03:57 AM)ThaFlump Wrote: [\[CITE\]](#) I don't think this actually works anymore :/

yea, refresh and go to home. should have 1 active server

(May 11, 2015 06:30 AM)Lyra Wrote: [\[CITE\]](#) I manage to make mine work

But i'm too afraid to store anything on it.

ikr, if u use a quickinstall of that dropbox like web script, its encrypted and there is a webclient. that might work pretty well.

?La FLame? - May 11, 2015, 7:34 am

(May 11, 2015 06:50 AM)UNKNOWNING Wrote: [\[CITE\]](#) i tried, doesnt work. i cant get the field to come up where i can tamper with the price. :/ if u get it working, hit me up.
The VPS creation page sends all web requests after finishing all settings.
If you then modify the web request it simply returns an error saying that the specified billing cycle does not exist.

Lazixo - May 11, 2015, 9:34 am

Awesome huh, Thank you! It works for me :D

Yurt - May 11, 2015, 11:17 am

I have one active server, but the domain does not work, maybe im just being retarded, idk xD

\$uicide - May 11, 2015, 11:27 am

(May 11, 2015 11:17 AM)ThaFlump Wrote: [\[CITE\]](#) I have one active server, but the domain does not work, maybe im just being retarded, idk xD
hmm, does it say that the website is active? it should bring you to a standard page if the website is blank. also, if you try using a .com domain, u have to actually own it and point the nameservers to the webserver. otherwise, use a free domain or setup a .tk domain.

Yurt - May 11, 2015, 11:42 am

(May 11, 2015 11:27 AM)UNKNOWNING Wrote: [\[CITE\]](#) hmm, does it say that the website is active? it should bring you to a standard page if the website is blank. also, if you try using a .com domain, u have to actually own it and point the nameservers to the webserver. otherwise, use a free domain or setup a .tk domain.

Just says not found, and yes it is active

Edit: Tried to add a subdomain but that does not work either

\$uicide - May 11, 2015, 11:45 am

(May 11, 2015 11:42 AM)ThaFlump Wrote: [\[CITE\]](#) Just says not found, and yes it is active

odd, ill make another one fast.

Yurt - May 11, 2015, 11:53 am

(May 11, 2015 11:45 AM)UNKNOWNING Wrote: [\[CITE\]](#) odd, ill make another one fast.

Tell me how it goes xP

Can't get it to work myself

\$uicide - May 11, 2015, 11:55 am

<http://creamy.hol.es/>

worked just fine, i think premium domains dont work with this method though. couldnt get .net/.com/.biz or anything.

l0l_l0l - May 12, 2015, 9:53 am

Hostinger is going to kill me.

\$uicide - May 12, 2015, 11:12 am

(May 12, 2015 09:53 AM)l0l_l0l Wrote: [\[CITE\]](#) Hostinger is going to kill me.

lol, I can take this down if you want. up to you, hit me up :P but it's a cool method.

Internet Thugs - May 12, 2015, 1:31 pm

Thanks for this man! Super useful just what I needed :D

red forman - May 13, 2015, 3:52 am

Works but hostinger doesn't have a cpanel? it's one of those template based website builders?

CJamie - May 13, 2015, 4:04 am

Thanks for the share man!

SIM-1729678 - May 13, 2015, 4:50 am

Need a verified paypal for this... Kind of sad now..

red forman - May 13, 2015, 4:51 am

Bro theirs no need to pay anything at all.

SIM-1729678 - May 13, 2015, 4:57 am

(May 13, 2015 04:51 AM)red forman Wrote: [\[CITE\]](#) Bro theirs no need to pay anything at all.

I tried it and every time I try to do the paypal thing it requires me to put in 0.01\$ or I am doing something wrong.

red forman - May 13, 2015, 5:34 am

Tamper data it's self can be used for many site's. As long as shit is setup automatically upon the payment being processed you'll get away with it and yes you'll have to pay a penny.

For this site specifically I did it and i'm in my Cpanel now uploading some crap. Didn't have to pay a dime. You literally choose billing cycle, open tamper data, delete everything thts in the "period" box and continue. Once it says invoice not found just refresh once or twice and click on host's. Should show your hosting plan.

.Satellite. - May 13, 2015, 7:32 am

Can someone post a video tutorial? I have tried this 4 times and I can't get it D:

Goes to show I am a n00b at TamperData

\$uicide - May 13, 2015, 10:53 am

ill do it later, give me a bit. have to mow the lawn. someone else asked me to

[Video: <https://www.youtube.com/watch?v=UAgpudRy54g&feature=youtu.be>]

IOI_IOI - May 14, 2015, 2:14 am

Iv also tried it on the ssl certificates and it works. To make it work instead of erase everything on the "period" box type in monthly and it will do it for free :) It says I have to wait 1 business day though I just tried it today im going till tomorrow.

It says this.

Data for Comodo PositiveSSL Certificate (sak0ya.zz.mu) has been saved. Please wait 1 business day for SSL certificate activation.

S????i - May 14, 2015, 9:27 am

I'm getting a "Period is invalid" Error. Please help!

\$uicide - May 14, 2015, 1:43 pm

(May 14, 2015 09:27 AM)xRapid Wrote: [\[CITE\]](#) I'm getting a "Period is invalid" Error. Please help! they may have patched it, ill check it out in a second.

Finestquad - May 14, 2015, 1:53 pm

And not working anymore? Thanks for this share:)

Mewtwo - May 14, 2015, 4:28 pm

If they patched it, you can simply go on <http://www.hostinger.com/> and see if other domains are vulnerable to this as well.

<https://cpanel.hostinger.es> works, I tested :).

IOI_IOI - May 14, 2015, 9:54 pm

(May 14, 2015 01:43 PM)UNKNOWNING Wrote: [\[CITE\]](#) they may have patched it, ill check it out in a second.

Comodo PositiveSSL Certificate ""Error"" - sak0ya.zz.mu 05/14/2015
So nevermind sorry guys Its not gonna work with ssl cert.

Pharcyde - May 14, 2015, 10:15 pm

(May 14, 2015 04:28 PM)Hitmarker Wrote: [\[CITE\]](#) If they patched it, you can simply go on <http://www.hostinger.com/> and see if other domains are vulnerable to this as well.

<https://cpanel.hostinger.es> works, I tested :). Tried <http://cpanel.hostinger.co.uk/> , didn't work for me.

<https://cpanel.hostinger.es> worked perfectly though, Thanks! ?

?Stark - May 15, 2015, 12:36 am

checked on <https://cpanel.hostinger.es>
and its working man thanx

l0l_l0l - May 15, 2015, 1:12 am

(May 15, 2015 12:36 AM)ax02798 Wrote: [\[CITE\]](#) checked on cpanel.hostinger.es
and its working man thanx
Are you guys talking about the webhosting? Or what...

?Stark - May 15, 2015, 1:14 am

(May 15, 2015 01:12 AM)l0l_l0l Wrote: [\[CITE\]](#) Are you guys talking about the webhosting? Or what...
Yup webhosting #25charlimit

l0l_l0l - May 15, 2015, 2:33 am

(May 15, 2015 01:14 AM)ax02798 Wrote: [\[CITE\]](#) Yup webhosting #25charlimit
But guys it works with cpanel.hostinger.co.uk still I just checked today and made a new website,
doesn't show any period invalid stuff. All you do is erase WHATS INSIDE "period" ex: period= "THIS
STUFF"
don't erase anything above that.

outback2010 - May 15, 2015, 7:36 am

Thanks a lot for this :) it still 100% works like the original method states.

Fraud Detective - May 15, 2015, 9:50 am

Thanks for this guide gonna try ?

???? - May 15, 2015, 9:52 am

hostinger's paid hosting is the same as the free one except you get more resources and you can
pick server location

its shit all around but thanks for the method, works

SIM-2508228 - May 18, 2015, 7:15 pm

edit: works like a charm thanks bro

ERICcou - May 20, 2015, 9:55 am

Getting this error "Period is invalid."

red forman - May 20, 2015, 10:32 am

UPDATE: No longer working with .es

Someone please post if they find another host that it works on. Tried a couple and payed a penny
but i guess the payment doesn't match the payment in whm panel and it doesn't register.

l0l_l0l - May 21, 2015, 1:23 am

Yeah they patched it. At least if you were able to keep out hosts.

AnonymousGanja - May 21, 2015, 6:28 am

Please help me ?

Not working for me :(

Dafuq - May 21, 2015, 6:51 am

The Method is patched as per my understanding.
