Thread: [need a PHP script which is uploaded on one site / server](#)

Salman Khan - May 11, 2015, 7:33 am

Is it possible to get a script which is uploaded on any site.

Site is simple and there is no security.

Need it badly.

Help me out please

Thanks

"there is no security". Just because a site looks simple does not always mean there is no security, I see this claim all too much.

Also, it seems like you want someone to hack this for you. This isn't the request section..

M not requesting.

If there is a way than I want to know.

Get administrator account, search for a place where you can upload stuff, upload. This can be done using various methods

such as CSRF, XSS, SQLi, XPath injection etc. Also you can try to find a vulnerability that lets you load files or execute commands directly from the site, then load the file there. If you have FTP username and password you can also upload the file via FTP.
