Thread: [\[Release\]\[Source\]\[Free\]PowerCrypter~Most Advanced Crypter On The Web](#)

**LogoiLab** - May 11, 2015, 11:36 am

Before I begin, I understand my reputation is low(mostly for gravdigging and people saying I'm clueless) This is my addition to the community to prove I'm nowhere near an idiot. I am giving you access to the source code as well as the compiled binaries to prove I'm not attempting to infect everyone, and that this program is clean.

## PowerCrypter

PowerCrypter is a crypter that uses an advanced "cold storage" and mutex function. It takes the binary you choose to crypt, reads its bytes, adds an EOF footer and then appends several random bytes. It takes this byte array and converts it to base64 it then compiles a small script that it stores in a temporary directory that is designed to take the base64 and decode it back to a byte array. Then the helper script recompiles the executable and saves it with a random name and runs it. Once that script is made, the crypter creates a batch file to run the helper script. Then it creates a file full of random characters. It then takes all three of these files(the helper script, the launcher batch file, and the file of random characters) and uses iexpress to package the files again. The crypter then takes the compiled package executable and copies it next to the original file.

Here are some screenshots of the program in action(please don't hate on my use of teamviewer thx):

Good crypter. FUD. Any way to bind file to .exe file without being detected? Vouch.

**LogoiLab** - May 12, 2015, 9:22 am

Next update I will include a binder

**Darksidex** - May 12, 2015, 9:24 am

You're scanning your crypted files on Virustotal?<.< Oh mate, don't do that... They distribute with other antivirus.

**Timo** - May 12, 2015, 9:26 am

The GUI could use some work, but it seems really decent!

Thanks for sharing, not gonna use it but i'm sure it will be help full to other people.

**LogoiLab** - May 12, 2015, 9:38 am

Scanning the compiled crypter itself yes, that's not gonna do anything.

**testkroket** - May 12, 2015, 11:36 am

You're awesome!!!!

Thank you!

No worries mate...?

**n0\$f3ratu\$** - May 12, 2015, 8:20 pm

This is far from "Most Advanced Crypter On The Web".

Anyway is nice to see someone releasing something for free.

**vgg5465** - May 13, 2015, 2:19 am

broken link... can you give me another one ?

**LogoiLab** - May 13, 2015, 5:19 am

The other two links should suffice because both are what are downloaded by the first link

<https://github.com/LogoiLab/PowerCrypter-GUI>

**tonymontanahaxalot** - May 13, 2015, 7:46 am

i thought virustotal was a big nono?

**LogoiLab** - May 13, 2015, 8:06 am

Eh it's fine for this because it's all base64 encoded with a mutex

**Toasty1903** - May 13, 2015, 12:52 pm

Thanks for this free crypter.

I will check this out.

**LogoiLab** - *June 29, 2015, 9:59 am*

Enjoy man...have fun!!!(You'll come to find that it is quite nice)
