Nice service! You should add this source to your software:

<http://y2code.com/forumdisplay.php?fid=7>

Over 50k fresh working proxies get posted here daily.

I have no problem with you integrating that into your software :)

NUFC'S VOUCH

I received a vouch copy of this program and below is my personal rating.

I will be rating it out of 5 stars.

Ease of use.

Reason: There is nothing to it. If you need a quick fresh proxy list then this is the tool for you.
Open > Press Grab > Press export

You now have what you need.

Quality of proxies:

Reason: I use proxies all of the time with SentryMBA and must say i get a lot less timeouts and banned proxy messages
when first starting a cracking session unlike the 100s i get instantly when using a public list.

Grabbing Speed:

Reason: If i could give more than 5 stars i would. I used a different program to get all of my proxies before i got this and it would take a average of 8 minutes per 5k proxies.

This program pulls up to 10k fresh proxies in (2 seconds) I am not saying 2 seconds because it's fast as hell i literally mean 2 seconds.

Value for money:

Price: \$15 For Life.

Reason: If you work out that just 1 of the premium websites EZ proxy uses to pull your proxies from costs \$10 per month that is \$120 per year and say you use this program for 5 years that is a total of \$600 for just 1 source.

Overall rating:

This program is worth every penny of your hard earned \$15. No question!

Please note this is my personal vouch. The vouch is based on what i personally look for in this type of program.

Different people have different views so i can only speak for myself.

Also from your(or anyone that currently owns it) time using the application, you got any features request?

Im thinking about adding free sources and adding a option to select Paid Sources or Free Sources or both, but not sure if you guys really want free sources.

NUFC - May 17, 2015, 8:31 am

My opinion would be not to add free sources. As i see it you can grab all of the premium proxies you need i would not see user's needing it.

You could release a \$3 version of the program to only grab from free sources as i know users doing this manually and it takes them a very long time so would pay. This would also help you in premium version sales as if they see how good & fast it is getting them they upgrade to the paid version for \$12.

Just my opinion :)

Ya, but even for \$3 I feel bad since the proxies are free. If I was to do this I would create it for free with a EZ-Proxy Pro banner on it. Great suggestion, though. Now I just need to find good sources for the actual scraping that are tested and ready to go since I really HATE having to check and test proxies which I bet a lot of people hate as well.

NUFC - May 17, 2015, 10:35 am

That's the thing mate you would not be charging for the free proxies you would be charging for pulling them all at once and they are ready to go. Obviously the \$3 spent on the free grabber would be taken off a upgrade to the pro version.

Anyways just a idea for you mate :) Good luck!

I already started on the project. I currently have 1 good source. The whole point of EZ-Proxy is to avoid having to check and test your proxies and even though this will be a free product, I want the same concepts to apply. Meaning I will only be adding sources that get updated daily. May I PM once I need it beta tested?

1. It does only grab checked online proxies. All the proxies it grabs are from the premium proxy sites. It does not grab from any other sources.

2. I believe I can do that without any issues, but there will only be a couple hundred socks.

3. Yes it does auto update.

EZ-Proxy V1.0.2 has been pushed out!

To update:

Method 1: Rerun old EZ-Proxy version and it will download the update.

Method 2: Download the latest update from <http://ezproxy.tf/update/latest.exe>

Code Changelog for v1.0.2:

- *Added country checking

- *Added option to sort and export only a specific country

- *Added the ability to only grab SOCKS

- *Added the ability to change your HWID every 7 days if needed

- *Added basic Russian translations(work in progress)

- *Added status bar so you know whats going on

- *Fixed bug where it does not save to Export.txt(hopefully)

- *Various small improvements and bug fixes to make EZ-Proxy more enjoyable and easier to use.

Screenshot of v1.0.2:

I do not see why not, only issue is that unless you buy private proxies, they might not be very reliable.

But how would I tunnel them all through 127.0.0.1 since the client I use only lets you use local and then a specified port such as 9955. So I would need 60 of them with 60 different ports tunneled.

also i thought these were private proxies?

I cant really help you with answering that question since I have no knowledge on that matter. From what I know, you cannot.

These are public proxies that are scraped and checked. Meaning the heavy lifting is done and you just click a button and are ready to roll. Private proxies are proxies that nobody, but you has access to.

Hey, nice program :)

Sometimes when I scrape proxies using the country check it returns a net exception so I have to wait again 15 minutes to scrape again. The issue is that sometimes it gives an exception 3-4 times so to get the country it could take 2 hours, if you could fix this issue would be good :)

Thank you so much for sorting this out mate.

I have bought this app/tool a while ago, I do SEO projects, as most of you know that every SEO projects rely on proxies. And I can confirm these proxies are the best in the business. What I like about this tool is:

- The fastest update ratio over dead proxies! Proxies get frequently updated, so you will find most proxies are working almost everytime.
- There are decent amount of google passed proxies included, which really boosts up the work with any seo projects.
- Most proxies are ~100+ms and stable.
- Bandwidth of most proxies are very reliable too.

Thank you for making such a wonderful app. I will recommend everyone who i know works in SEO group to buy from you.

Hey,

Ever since a couple days ago, I've been only able to grab 2000-3000 proxies. Used to be 8k - 9k before, and I am getting some text for the results as well sometimes.

In one of the recent grabs, this was in the proxy list:

```
Code <!DOCTYPE HTML PUBLIC "-//IETF//DTD HTML 2.0//EN">
<html><head>
<title>500 Internal Server Error</title>
</head><body>
<h1>Internal Server Error</h1>
<p>The server encountered an internal error or

your request.</p>
<p>Please contact the server administrator,
root@foxtrot030.startdedicated.com and inform them of the time the error occurred,
and anything you might have done that may have
caused the error.</p>
<p>More information about this error may be available

Its a issues on the proxy site. If the site goes down it grabs incorrectly. I noticed it as well, but nothing really I can do since Its a issue on their end and we must wait for them to fix it.

We have a sort by socks, but its down since the place I grabbed kept banning my license. =/ so thats currently offline until I figure it out.

So atm all the socks are mixed into the list with the rest of the proxies. The proxies are automatically exported into a .txt file with IP:Port :)

The list is mixed with http/socks which is why it may seem like a lot are not working since when you import them with the http protocol all the socks will fail. They are all grabbed from paid shared proxy websites. What are you using the for?

I will buy and add more sources if need be. Don't like having unsatisfied customers. Let me know what you are looking to use them for and I will see if I can find another paid proxy source that can fill the need.

Also, everyone keep in mind that these are public proxies that have been scanned and checked by paid proxy sites. I always feel like people think these are private proxies.

Does this product have a feature to separate https and sock proxies?

[\$(5)\$] - June 2, 2016, 10:10 pm

This seems to be an extremely high quality product. I have a few questions and would love to have a chat.

Do you happen to have the ability to communicate via Skype? It's the easiest form of communication on my end.

Thanks in advance for your prompt response to my inquiry.

It did, but currently disabled due to the part that I do not check proxies and for me to actually split them I would have to make x2 times more api calls which would look sketchy on the proxy services end. Currently its all bunched into 1 list.

Ya I replied. Thats a bug which I had 1 person report to me a while back. I do not know what causes it since it doesnt make sense. He also said he left his pc/application running none stop which made the program bug out and just call the same proxies over and over. Restarting seems to the fix the issue. Let me know.

Also I set up a rack server as a workstation while I wait for parts to rebuild my main rig.

Congrats on the great product! How many working proxies does this pull in? I'm interested i purchasing, but most scrapers only yield a very small amount of actual working proxies.

Edit:// I purchased this product and I'm pleased with how many working proxies it produces. Great price for the amount and quality you get. Only took a minute to grab over 3k working proxies. Thank you!

So it grabs like 5k from the paid sources. I am not sure how often the sources recheck there

proxies, but I been told people have good success with this program. Every 15 minutes when you pull proxies there will be some new ones and old ones being removed. They are constantly changing due to the sources rescanning them. I believe EZ-Proxy is the only proxy grabber on HF that doesnt grab from pubic blogs,forums,etc.

Im glad you are happy. The number proxies its grabs varies hour by hour. The number on the thread is bigger because its not sorted. Its the exact number it pulls in from all the paid source apis added up. When you pull inside the program it filters the duplicates and all that good stuff. If you have any suggestions for sources sources I can add I would love to hear it so let me know.

Been using this for a year now. Had some troubles for a bit but it got sorted of course. But glad to see it's been flowing nicely the past few months. The proxy list it gives me are always A1. I got grabs from months ago that still do work. I would like to see some more premium sources, but I'm not complaining. More the merrier imo lol.

They are false positives. Nothing else I can say other than the fact that I been selling it for over a year with hundreds of customers. What triggers the detection is the obfuscation used.

PSN is a tricky one. PSN bans proxies very quickly, meaning even if you got a nice a list it wouldnt last long.

I saw your PM that you wanted a proxy checker added. I have been wanting to add one for some time, but not sure what kind to add. Should it just be a URL field where you specify the website and it checks every proxy to see if it is able to connect to that website or more of a general proxy checker where it just checks against a random site.

I also brought back the source that went down, its back up so I re added it to the list :)

Something just basic just to see if the proxy is alive would be great and if we can add our own link to test it against a certain cite, that would be a bonus mate

I decided to do it in a new language and I am total noob at it ATM. Slowly learning... Because its in a new language it will probably be its own standalone application.

I am getting really tired of VB and C#. Its so abused that no matter what you do , it gets detected by AV's as false positives..

Correct. Public proxies that have been checked and what not.

Something to consider is the length of the service. I been in business for some time.

Sock5 export only doesnt work. It requires me to make X2 more API calls to the sources and it gets me banned. So Its all mixed into 1 list.

I only use HF message because of imposters.

Its pretty simple:

1. Grab all proxies
2. Run them through a checker
3. sort by type :)
