Thread: [How to edit a WIN32 Cabinet Self Extractor Application](#)

BlackhatSEO - January 31, 2009, 1:08 am

[img]<http://img91.imageshack.us/img91/7849/antitampayu5.png>[/img]

I have this application "Anti tampa" which remove the virus.. i right click the application, and i go to properties, and i found out that its an application type of Win32 Cabinet Self Extractor, i search on the net on how to make this type of application, and i found out that it is made using "iexpress"... just type it in run command, and this will appear-->

[img]<http://img136.imageshack.us/img136/9919/iexpressbd5.png>[/img]

Now that iexpress is used in compiling the application, its because i right click the "Anti Tampa" then i choose extract, and a two files appear.. one is the batch file(which is for the code of deleting the virus) and the other is the application itself, now i want to know how to edit the application.. i keep searching on the web but it just gave me a head ache, i try using different software to edit but none of it succeed... could anyone out there help me? or any idea? i want to edit the application, the buttons, the creator, etc... cuz im planning to make my own application as simple as that.... any help is appreciated.. Thanks A lot..?

To make it clearer, the one encircled in color blue is the original application, i right click it and that two files appeared,the one encircled in red.. a .bat file named "Clean_~1" and an .exe named "Anti"... editing the .bat file is that easy..but editing the .exe which is "Anti", is quite difficult.. i wanna know how can i edit it?? when i say edit, it means edit the name of application edit the creator, edit the buttons,etc...i know its possible, but how?pls help me.... or if no choice how can i make an application exactly like that...
