Thread: [NjRat Setup Tutorial For Beginners](#)

PoopyJew - May 18, 2015, 6:39 am

Since people liked my other guide on DarkComet I will make another one for NjRat. This time I'll try and make it a more proper guide by adding spilers and stuff. My DarkComet crapped out and it really broken and I've found that NjRat is WAY more stable so here we go

First to download NjRat, Since I am not a trust member on HackForums (yet) I will provide the HackForums link to a very trusted member who provided the download link.

<https://hackforums.net/showthread.php?tid=3924408&highlight=njrat>

Link to NjRat Thread Download ^^^^

Once that is downloaded just extract it into a folder on your desktop.

Now we have to port forward. Open up your Command Prompt, If you don't know how to do that then just type in "cmd" in your start search box located in the bottom left hand corner of your screen when you click on your windows symbol circle.

Inside of your Command Prompt box type in "ipconfig" without the quotes.

Spoiler [\(Click to View\)](#)

Look for the connection you are connected too and find "Default Gateway"

Spoiler [\(Click to View\)](#)

Type the numbers into your address bar and hit enter, then proceed to login to your router. Make sure to keep command prompt open we will be needing it soon.

You have to find in your router settings where you can port forward. I have a net-gear router so it simple says "port-forward and port triggering" If you have a different router and are not sure on what to do then look at this website and find your specific router and follow the guide.

Spoiler [\(Click to View\)](#)http://portforward.com/english/routers/port_forwarding/routerindex.htm

Put the Start and end port at "7777" or whichever you want to port forward I will do 7777 since that is the default for NjRat. In your command prompt find where it says "IPv4 Adress" mine is 10.1.1.2 so my port forwarding looks like this.

To check if your port is open go to this

Spoiler [\(Click to View\)](#)<http://www.canyouseeme.org/>

Type in the port for forwarded, it will say "Yes we can see you" in green text if it is properly forwarded.

Time to get a DNS, do not rely on No-IP anymore so I've found another one. Link is here. Spoiler [\(Click to View\)](#)<https://freedns.afraid.org/>

You can get this done in a few easy steps.

- 1.Register an account.
- 2.Click "Sub-Domains" and make a domain leave all the settings the way it is.
- 3.Go to "Dynamic DNS" Scroll down to windows (if you're using windows) and download the Free DNS Updater
4. Install the updater and login to it and that's all.

If these steps confuse you (which they shouldn't) Shoot me a pm and I will set up everything for you, free of charge.

Everything is almost done. Now just to test your RAT on yourself. Open up your NjRat. A pop up box will appear telling you which port you want to use. We port forwarded 7777 so we will type 7777. Spoiler ([Click to View](#))

At the bottom of NjRat you will see "Builder" Click on that and this window will pop up. Spoiler ([Click to View](#))

In "Host" type the DNS name you created on "free dns" Bunch of settings there to play with. Click "Build" and you're done.

Sorry I kinda half assed this tutorial was just not feeling too up for it but oh well. Need any help just pm me or leave a reply. Peace

DNS.SPYWARE - May 18, 2015, 7:27 am
good for you for helping others

#Skyline - May 18, 2015, 7:48 am
Nice tutorial.
Should help alot of new users out with njRAT.

PoopyJew - May 18, 2015, 8:18 am
Thank you guys, I really appreciate it. :D

Business - May 18, 2015, 4:50 pm
I may make one of these myself soon, good job trying to help out!

Do you think you can help me set it up?
I am having a problem in port forward... I do what the internet says, but it doesnt work...

-Thanks :D

Ofc man :D Pm me your skype or teamviewer

aresto - June 6, 2015, 1:52 am

Nice tutorial but I tested it on internal connection but it didn't work

xXnovicXx - June 6, 2015, 3:01 am

I can now get into my router config. I port forwarded the ports 7777 and 5552 but when i go to canyouseeme.org it can't see me could you help?

brekete101 - August 27, 2015, 1:49 pm

Omg, thanks alot for this simple and clear tutorial. I succeeded to set it up without much hazzle. But I had problem with the DC, I followed all the instructions and yet it didnt work. Could you please help with the setup. Or maybe I have a compromised RAT, I actually got it from here HF. Please help me out I am a noob. Could I have your skype or something??

Thanks alot.

ParadiseDealz - April 7, 2016, 6:22 am

Thanks for information . Can you please tell me how to infect and connect it with the rat :)

Tutorial For Beginners part 2

TopDawgIO - April 7, 2016, 7:28 am

Very simple tutorial, thank you

JaguarHack3r - April 7, 2016, 11:13 am

nice work should help lot of beginners

Bad Boy - April 29, 2016, 12:59 pm

Simple and well explained for beginners, Thanx

Capt. Murphy - April 25, 2017, 9:42 am

Damn. I thought it would've been harder than that! Thanks!
