A server can mean a lot of things. What kind of server are we talking about here ?

Web server ?

Mail server ?

Cloud ?

You probably can find a tutorial on HowToForge.

<https://www.howtoforge.com/perfect-server-ubuntu-14.04-apache2-php-mysql-pureftpd-bind-dovecot-ispconfig-3>

For example of a web server with apache, mysql, pureftpd (useless), bind, dovecot and ispconfig.

I suggest getting Ubuntu 14.04 and googling "Digital Ocean Ubuntu Server Setup"

#sorry I can't post links yet
