Thread: [Standalone Formgrabber - Need beta testers and name suggestions](#)

studio? - May 19, 2015, 3:15 pm

I've been working on a formgrabber, standalone version for the sake of being bored.

I've successfully implemented the following protocols to the corresponding browsers:

Chrome:

spdy

ssl

http/2.0

Quic

FireFox:

spdy

ssl

http/2.0

IE:

spdy

ssl

http/2.0

Spoiler ([Click to View](#))

I'm looking for beta testers, also i'm looking for people to suggest names for this standalone formgrabber. Keep it simple but clever.

Lenchmob - May 19, 2015, 3:19 pm

Form Grabber that basically just jacks all the accounts saved?

Scymo - May 19, 2015, 3:20 pm

I'm not much of a tester but:

Swiper

seems like a cool name

It intercepts all protocols provided above and looks for POST Methods.

I think formgrabbers are disallowed here, aren't they?

Yes but they're most commonly used in stealing financial information. Regardless of whether or not they have their whitehat uses, Omni hasn't allowed the discussion or sale of them.

From what my search results tell me there have been a few formgrabbers that were sold on this forum, did omni himself confirm that formgrabbers couldn't be sold?

I do believe so. I'll see if I can find some backup for that. Can't find it in the [Help Docs](#) but I'm sure he's mentioned it before.

That'd be greatly appreciated, don't feel like wasting time just to have my sales thread deleted.

Yeah I can't find anything. I guess that solves that. Sorry about that. Though I reckon you might should still be prepared in case. I really feel like he cracked down on that once but search seems to show otherwise.

Best of luck

It's fine, better safe than sorry. I plan on selling this elsewhere as well, so it shouldn't be a problem.

Wow this is so cool you can use this to check your forms if secured or not. Also can be use to detect exploits. I would love to test this tool.
