Thread: [BEWARE - READ before buying a stresser/booter/ddoser.](#)

Sparta. - May 19, 2015, 8:12 pm

Closing/deleting this thread is not necessary. It is good to REMIND our community that bullshit booters (like eBooks) should be given pervasiveness to the community.

I'm just going to put this out there, just like the other obvious shit such as my eBook [thread here](#).

Be careful before buying any booter.

First off, there is no such thing that exists as a high quality and cheap booter here, keeping these points in mind:

There are hundreds to even thousands of users already using it.

No booter on this forum will take down even a medium sized website, regardless of their claims of power.

Almost every booter is volatile and can be shut down, sold off to another owner, or lose its consistency without notice.

ALMOST EVERY single booter out there uses PUBLIC or SATURATED or OUTDATED source code.

Almost every booter user base will overflow sooner or later and the demand for power/attack speed and result in terrible performance.

NEVER, NEVER sign up to these services with your REAL INFORMATION, ESPECIALLY your HackForums username/password. The databases get leaked by an intrusion based off of weak security or by previous owners.

Booters are a huge part of HF, and many users fall victim to buying really cheap, shady (the redundancy, lmao) and low quality booters that often try to mesmerize people with their claims of high Gbps bullshit.

Notice how completely bullshit these threads are (I AM NOT CHERRY PICKING):

Almost every single one claims that it can carry an attack of OVER 200 Gbps. Do you know how crazy of a fucking claim that is? If this were even close to being true, almost every booter on HF would be able to take out a medium to somewhat high end website or game server; sadly this is never the case.

The booter "market" on HF is becoming as crazy as the eBook "market" on HF. You see complete bullshit threads, mocked up with a \$5 thread design and some bullshit title to claim your greedy eyes on taking down the bully's internet in your school.

People on this forum need to be AWARE and COMPETENT about the booter situation. No booter was coded by some "top notch hacker/programmer" that you see in any action heist/robbery movie. 95% of the booters on HF consist of a tree of hand-me-down source code that is already outdated and just pure shit.

The best thing out of a booter that you will get is taking out a home connection, and even then most booters still can't do that.

Think before you buy a booter. The IRL bully "revenge" can wait for later.

Hydra - May 19, 2015, 8:17 pm

Not sure about other booters but vDos lives up to its claims. It can take down medium to large websites.

Obviously there are good and bad booters, you just have to figure out which is the good one.

Sundown - May 19, 2015, 8:56 pm

Quality is all I can say.

You pay for what you get. most of the time....

Tokyo - May 19, 2015, 9:07 pm

Not really OP, some booters are false advertising and won't even hit off a home connection and some stressers will hit off large game servers.

Sceptor - May 19, 2015, 9:13 pm

I agree with you about this OP to many people false advertise on the market it crazy.

#YOLO - May 19, 2015, 9:18 pm

Some are shit, some are not.

When I ran a booted for a month, it could hit half decently, nothing special.

I tried to not make false claims, which lead to me only lasting a month.

SIM-1472133 - May 20, 2015, 2:46 am

People should be getting a dstat from other people not the OP for power tests. usually even then the stresser owner will use their total network and not a single hit. for people who want serious power should either make their own with their own servers or build a botnet. It's as simple as that. For example I offer free dstats to the public to try stop the shit stressers.

Autocorrect - May 20, 2015, 2:49 am

I completely agree. I remember when noobs were still saying that Legion Stresser was good.

They're all bad. They are only of good use for home connections. The dstats are rubbish too.

The only good service you'll ever get here is a privately paid botnet request.

bloodhawkbh - May 20, 2015, 2:51 am

That being said, do you know any that can knock off at least home connections reliably that are affordable? I've been looking around but everything I find has some absurd TOS like "we can shut this down tomorrow if we want and you can't get your money back".

Meow - May 20, 2015, 2:52 am

Couldn't agree more, thanks for warning others! ?

Syracusia - May 20, 2015, 3:05 am

I can't agree with you.

Price != Quality.

<http://orcahub.com> is one of the hardest hitting stressers and it is free

Cameron. - May 20, 2015, 6:34 am

Lol 90% of them are shit and close in 1-2 months.

Save your money and just buy your own server.

Sparta. - May 20, 2015, 12:49 pm

(May 20, 2015 02:51 AM)bloodhawkbh Wrote: [\[CITE\]](#) That being said, do you know any that can knock off at least home connections reliably that are affordable? I've been looking around but everything I find has some absurd TOS like "we can shut this down tomorrow if we want and you can't get your money back".

I can only suggest that you use one that is a new stresser that just came up with a very small user database and multiple servers that is hosted by a trusted owner.

If you happen to buy a stresser that has a ToS claiming that it can be sold off to anyone "without notice" or shut down "without notice", and this having been happened, immediately charge back and file a scam report.

It's the owners job to provide services that they promise, and if you, let's say, buy a monthly/yearly plan for a stressing/booting service and it is shut down, sold off, or giving bad performances and the owner does not contact you (and the customers) about it, it is at their fault, not yours.

One misconception people have about running an imitation of a "business" on the internet is that they think that they aren't responsible for providing a service for X time for Y price. People must learn that if they provide a service for a charge for a period of time, they are responsible and at fault in all terms if that service is limited, overrated/saturated, or volatile (service-model wise)

SIM-1472133 - May 21, 2015, 12:45 am

Dude it hits like shit xD Don't try to advertise your stresser here.

Windows95 - May 21, 2015, 12:54 am

Have to agree and disagree. Most booters are crap. However not all, not to advertise but my stresser won't be false advertising and will kill business for more small/crap booters. Only large // HQ booters will have a chance of staying. vDos and PowerStresser are to name two.

Koba - May 21, 2015, 1:40 am

vDos is reliable. I've been using it the past year & never had a problem hitting off a home connection.

I have also heard some people talk about Power Stresser being reliable but I have never used it.

M30w - May 21, 2015, 11:22 am

Quite not true, I coded vDos's (vDos-s.com) source from scratch. there are still some knowledgeable members who are still around and familiar with the SST industry such as Horny, Spai3N and Fluffy.

If this were even close to being true, almost every booter on HF would be able to take out a medium to somewhat high end website or game server; sadly this is never the case.

I'm afraid you're wrong, this is 2015, launching a 200Gbps attack is now easier than ever, a dedicated server which connected to a 1Gbps network costs somewhere between 50 to 150 dollars (10TB of bandwidth, unmetered servers costs a lot more than that). a 1G dedi can theoretically generate about 30.8Gbps of SSDP traffic (1000Mb/s*30.8) and 28-54 Gbps using DNS amplification. therefore, you'll need about 7 servers (considering each one of them would be connected to a private 1g line) to launch launch this sort of attack.

(~<https://www.us-cert.gov/ncas/alerts/TA14-017A>)

I'm pretty sure 90% of the booters would be able to hit offline a simple home connection considering the fact that you'd need less than 500Mbps to take an average home connection offline.

for example, this is vDos hitting at 7Gbps:

Spoiler ([Click to View](#))

EDIT:

Powerstresser hitting at 5Gbps:

Spoiler ([Click to View](#))

Str3ssed networks hitting at 8Gbps :

Spoiler ([Click to View](#))

If you'd ask me, I'd say 5-8Gbps is more than enough to take down a simple home connection and most servers (I'm not talking about DDoS protected ones).

and no, I'm not posting this because this is my project, I'm positing this to show that there are still some HQ booters out there such as PowerStresser Hornystress and Fluffy's stresser.

You should've done some research before posting this.

SIM-2223238 - May 21, 2015, 11:40 am

<http://quezstresser.com>

Thats what you need.

Sparta - May 21, 2015, 2:17 pm

(May 21, 2015 11:22 AM)P1st. Wrote: [\[CITE\]](#) You should've done some research before posting this. You shouldn't post on a thread just to imply the advertisement of your booter, prick.

Acite - May 21, 2015, 2:23 pm

I completely agree on this, only booter I've used from here was vDos and it was down a lot of didn't take down home connections at times.

Hopsin - May 21, 2015, 2:27 pm

This applies to every product on HF, example: crypters. I thought it was kinda obvious. (Each product have its own downsides etc.)

M30w - May 21, 2015, 2:33 pm

?

Mind providing me your username so I can verify that? I'll grant you a full refund if you're not satisfied with my product.

FrankServices - May 21, 2015, 10:07 pm

Finally someone made this topic.

Biz Nessman - May 21, 2015, 10:09 pm

I remember back when I had access to private Shenron servers.
Hilarious as fuck.

Took down the entire Kik networks, full RS worlds.
Comparatively I just don't feel anything does ANYTHING on Hackforums.

Peter - May 22, 2015, 1:23 am

No, most booters are advertising 200Gbps TN (Total network).
Which I still find to be complete bull shit from most of them.
Speaking from experience, vDos lives up to what it says and for the most part, so does powerstresser.

Sparta - May 22, 2015, 5:24 pm

(May 21, 2015 10:07 PM)FrankServices Wrote: [\[CITE\]](#) Finally someone made this topic.
The only thing now is to keep this on the front page so people open their eyes to not only booters but every other bullshit scam out here.

Alpis - May 22, 2015, 5:40 pm

If you dont believe the power of fluffy we give test hits, check it out. Lol.

S corpion - May 22, 2015, 5:43 pm

haha, that was a joke right? V-Dos is terrible. And i'm sorry but XYZ.Booter can take down almost anything. Your thread is irrelevant.

Alex™ - May 22, 2015, 5:47 pm

Here come all the butter providers telling you that you're wrong, that margarine is no substitute for real butter!

PLT ? - May 22, 2015, 5:51 pm

I have to agree with this thread. Infact a lot of the booters on this site (I'm not going to name any) will only take out about 60% of home connections. That's pretty bad if you ask me.

Alex™ - May 22, 2015, 6:05 pm

Basically every skid buying a booter : <http://en.wikipedia.org/wiki/Tantalus>

They fall for the false advertising, see that it doesnt work and then buy another one, rinse, repeat.

PLT ? - May 22, 2015, 7:46 pm

(May 22, 2015 06:05 PM)Alex™ Wrote: [\[CITE\]](#) Basically every skid buying a booter : <http://en.wikipedia.org/wiki/Tantalus>

They fall for the false advertising, see that it doesnt work and then buy another one, rinse, repeat. It seems to be poisoning peoples minds, too.

I've noticed that people will buy a booter that advertises 50Gbps, hit a home connection and it will fail. They will then proceed to think that 50Gbps is a low amount of power and can't hit home connections. This leads to them buying a booter that advertises more power. It's quite ridiculous really.

Durham - May 23, 2015, 3:51 am

Well, all stresser are not shit, some are and some are very good.

Super Gogeta - May 23, 2015, 5:06 am

Lol a user that people should DWC with making a DWC thread. Ironic.

Sparta. - May 23, 2015, 12:11 pm

(May 23, 2015 03:51 AM)Durham Wrote: [\[CITE\]](#) Well, all stresser are not shit, some are and some are very good.

Out of the hundreds of active stressers, only 1% of them are even close to good and are either expensive or sugar coated.

Not just "some are good" and "some are bad".

?Plutus - May 23, 2015, 8:37 pm

You shouldn't be buying a Stresser to take down medium websites hosted on OVH anyways. Purchase bots or sumn if you wanna be topkek

Sparta. - May 28, 2015, 1:49 pm

(May 23, 2015 08:37 PM)PositiveEnergy Wrote: [\[CITE\]](#) You shouldn't be buying a Stresser to take down medium websites hosted on OVH anyways. Purchase bots or sumn if you wanna be topkek
Yes, but people want a cheap way of booting an IP off. It's the mentality of the HF user.

b?xxy - May 28, 2015, 1:54 pm

Also don't use your HF credentials or other credentials when registering.
They often get leaked.

Chocola - May 29, 2015, 7:21 pm

(May 28, 2015 01:54 PM)b?xxy Wrote: [\[CITE\]](#) Also don't use your HF credentials or other credentials when registering.

They often get leaked.

Or the databases and what not are sold off to another owner for their own booter, which takes over the one that they bought the DBs from.

Liquidation of assets, basically.

haydrazs - May 29, 2015, 7:35 pm

Powerstresser and Vdos only ones i've seen that live up to their claims.

Sparta. - May 29, 2015, 9:37 pm

Yep. Never, EVER, trust a third party (identifiable as individual "service" providers on the internet, such as booters) with data that is even somewhat relevant to your person information.

It is a MUST to take the necessary precautions before even thinking about creating that new account or inputting your information.

we r num 1 - May 29, 2015, 9:38 pm

You should also add that you should never sign up with your main information, use separate information because those booter databases are always getting dumped.

Sparta. - June 22, 2015, 2:11 pm

Since everyone loves my name, I'll happily emerge this message back to the HF members again.
