Freebooter - May 20, 2015, 4:04 pm

Boost Windows O/S & Network Performance Hello HackForums Members

I have created a program called SysPerf that will speed up Windows Operating Systems (OS) and broadband network connections.

This program has been tested by me multiple times to make sure it will not cause any errors and problems with Windows OS and network connections but to make sure everything's safe, I also use the ERUNT.EXE utility to backup your Registry, just in case you want to restore Windows OS to its default settings.

This program is made in Batch, and I had to convert to executable because I have to use third party utilities like pagedfrg.exe, etc. in it.

You can view the executable file content if you want all you need to do is to execute the SysPerf program and open the TEMP (C:\Users\%USERNAME%\AppData\Local\Temp) directory, one of the subdirectory in TEMP directory holds content of the SysPerf program.

I suggest you to run the SysPerf program with no program open at all (everything close), this way SysPerf will work better to boost Windows OS performance (by making a more accurate diagnostic).

Do not close SysPerf even if it looks stuck, frozen or not responsive. It does not get stuck even though the output of the SysPerf program sometimes stay static for long period of time, it's still working in the background.

The process can take up to 10 minutes or more to complete, it depends on your hard drive current fragmentation level.

Please execute SysPerf_x64.exe if you're using a 64-bits version of the Windows OS.

System Requirements:

Windows XP with Service Pack 3

Windows Vista

Windows 7

Windows 8

Windows 8.1

Windows 10

VirusTotal Scan Results:

[SysPerf_x64.exe](#)

[_SysPerf.exe](#)

[_SysPerf.zip](#)

Note: The SysPerf.exe executable program have the same content as the SysPerf_x64.exe program but for some reason, a few unknown Antivirus programs thinks that it's a Trojan-based malware. These are what we call false positives. I can confidently say to you its not a virus if needed I can let any person view the Batch Script and utilities used to create SysPerf. They can also reverse engineer it if they want (since it's written in Batch, it shouldn't be complicated at all).

DOWNLOAD: [SysPerf.zip](#)

[\[BHCPU\] Tweaking & Optimizing Windows -Tutorial](#) by [Freebooter](#)

Please post any questions that you might have about the tool, and I will do my best to answer them.
Thank you ?

Personally tested this with Freebooter and am happy to see this released. Great work, this is very handy for everyone.

Mi2414 - May 20, 2015, 6:34 pm

Just got a skype message from my man FreeBooter, Personally I find this program great.. It did boost my internet speed quite a bit.. :) Thanks man ?

Freebooter - May 20, 2015, 6:40 pm

Rita Ora ? - May 21, 2015, 4:08 am

I can personally Vouch for this, FreeBooter knows what he is doing when it comes to Windows and this program works like a charm! <3

Freebooter - May 21, 2015, 3:22 pm

Gnome Child Wrote:I can personally Vouch for this, FreeBooter knows what he is doing when it comes to Windows and this program works like a charm! <3Thank you very much for your support mate.

I'm glad you like my program and work without problem to boost performance of Windows O/S and Network connection.

datguy.dev - May 21, 2015, 3:46 pm

Greetings,

I had some spare time today so I thought I'd put together a little bit of before and after analysis. Nothing super professional or thorough, just to see what results come out and to show so people know what to expect. I used a Windows 7 x86 VM (1 core / 1 GB RAM / 25 GB HDD) the usual.

Overall, I think it's nice little program. Simple to use and it goes through many avenues for cleaning up an install. If used on despite computer, it sure should help. The things I didn't entertain as much would be there aren't enough prompts for user input. Although there are many where critical. I just felt like many processes were executing without acknowledgment. Also perhaps an option to skip a certain feature or scan would be better than 'yes or exit.' I personally don't like removing event logs. Something off putting about .bats compiled as .exes.

Gallery of images of sandboxed files/processes and operation: <https://imgur.com/a/aHzUa#0>

Benchmarking:

Networking speedtest:

*Time*download*upload

testmy.net before:

2:52 pm - 19.6 down / 2.2 mbps up
3:04 pm - 19.4 down / 2 mbps up

testmy.net after:

3:50 pm - 14.9 down / 225 kbps up
4:00 pm - 15.2 down / 192 kbps up

NoScript - May 21, 2015, 4:29 pm

Well I really feel bad for switching over to Korora (Linux), well I may just have to test this in a VM to see how good it is.

I can initially vouch that Freebooter does indeed know what he is doing, good job!

XomeNhala - May 22, 2015, 6:07 am

Nice job @Freebooter ! Thank you for sharing this. Very handy.

Freebooter - May 23, 2015, 12:20 am

Thank you all for supporting me and my program, i'm happy to know my program boost performance of your PC's.

@datguy.dev my program does not give or drop ISP broadband speed my program speedup download speed if internet download manager used can download from multiple servers. My program tweaks TCP/IP protocol to handle multiple connections this can speedup download from Peer-to-peer file sharing service or server.

Raz3r - May 30, 2015, 9:07 am

Just tested this, works like a charm.

PhoenixDoom - May 30, 2015, 11:24 am

Running this on my laptop, right now it's at the "Pre-Optimization report" and it's been like that for about 15 minutes.

Freebooter - May 30, 2015, 11:28 am

(May 30, 2015 09:07 AM)Raz3r Wrote: [\[CITE\]](#) Just tested this, works like a charm.Thanks i'm happy know my program worked. I have tested and code the program more then two weeks i make sure it wont cause any negative result and works on all Microsoft Windows Operating Systems and boost performance of Windows OS and Network.

Yeah, it went blue, then it did a few other things and asked me to rebooted.

Freebooter - May 30, 2015, 12:02 pm

(May 30, 2015 11:52 AM)PhoenixDoom Wrote: [\[CITE\]](#) Yeah, it went blue, then it did a few other things and asked me to rebooted. Last step of the program is to ask user to reboot the system. If you have not reboot the computer you should or some of the performance tweaks wont work without rebooting the computer.

Yeah, I did. I don't notice much of a difference, but I'm sure when I load up a game I will. :)

Thanks for this.

Freebooter - May 30, 2015, 12:14 pm

(May 30, 2015 12:05 PM)PhoenixDoom Wrote: [\[CITE\]](#) Yeah, I did. I don't notice much of a difference, but I'm sure when I load up a game I will. :)

Thanks for this. You will notice Windows Explorer starts faster and next reboot will be faster also now Windows can handle multiple network connections this means you will able to connect to multiple servers and clients at same time download speed will be faster as long as the downloaded file is downloaded from multiple servers.

Evil Corp - July 9, 2015, 12:23 am

I just install re-install windows 7 on my laptop and I run your program.

Can I run this again in the future?

Freebooter - July 9, 2015, 1:28 pm

program does what i coded to do so. You can run the program anytime and much as you want when computer performance is slow.

inkbird - July 28, 2015, 8:35 am

Freebooter, thank you very much for your help. I downloaded your SysPerf tool. It worked great. My RAM has dropped to 25% from 35% and overall everything is running much smoother. Files and programs respond a lot quicker and the computer is running very smoothly.

Thanks again mate. I appreciate it.

Freebooter - July 28, 2015, 10:16 am

If I read your charts correctly, much of your performance looks like it is worse "after" than before. Is this correct? The Direct 3D chart is a solid example of what I mean.

Freebooter - September 9, 2015, 5:43 pm

(Sep 9, 2015 12:37 PM)Tron40 Wrote: [\[CITE\]](#) If I read your charts correctly, much of your performance looks like it is worse "after" than before. Is this correct? The Direct 3D chart is a solid example of what I mean. What the hell Direct 3D has to do with my program do you even know what is Direct 3D use for no you don't. If you want to put down my program you have to do better then this the test results are joke they prove nothing my program bring down memory usage but on the test its up more impossible also on the test there is memory usage of the graphic card what is my program got to do with graphic card memory. I test my program on multiple computers including my computer and they perform better then they were i don't need no tool to tell me if my program works. Before i use my program i could only download speed of 2MB after i use the program it can go up to 4MB also telling my program don't speed up Windows OS is a joke i use tools from Windows OS like Windows Defragmenter to boost performance of Windows OS so don't tell me my program wont work.

I didn't mean any disrespect when I made my post and wasn't trying to put down your program. In fact, I actually don't know about Direct 3D. I was just looking at the chart and asking if I misunderstood the results. Apparently, I did misunderstand.

The reason I checked out this thread is because I don't have that much memory on my computer and could probably use something like your program to make it run better. I'll give it a try tonight if I have time and see if it helps me.

MrJamieMcC - September 10, 2015, 1:52 pm

When you say this program allows you to connect to multiple connections and thus increase download speed. Would that include uTorrent download speeds?

Freebooter - September 10, 2015, 3:52 pm

Vittorio - March 10, 2016, 1:38 pm

I've been on Pre-Optimization Report for like an hour now, is this normal

Freebooter - March 10, 2016, 3:29 pm

(Mar 10, 2016 02:38 PM)Vittorio Wrote: [\[CITE\]](#) I've been on Pre-Optimization Report for like an hour now, is this normalYes its normal that screen is displayed for statics of defragmentation process on going.

SysPerf program displays static screen while defragmenting the C: partition the SysPerf program may look time to time its frozen but its not and never will be i make sure of this, the program still working in background if you watch HDD activity light you will notice its busy because C: partition is been defragmented by the program.

dexxtrr - March 18, 2016, 7:15 am

Great programm, thanks for the share!

I've done the reboot now, didn't encountered any problems while i was running the programm.

Nice work!

Phlox - September 28, 2016, 4:18 pm

Thanks for updating my Sysperf program download link inkbird i cannot do it myself as i don't have post count that let me post url addresses. My program can be found at my own Dost-Tech forums link given by inkbird, i also have many more tutorials and more to be added soon. The Dost-Tech forums is only month old its new but will be one of the best forums one day i promise.
