1) This couldn't jack a twitter I already know the username and password to. True story, if you paste the correct username and password 10,000 times into a list it still wouldn't crack it.

2) My computer, which has 12 logical cores and DDR4 ram constantly crashed. This program is more unstable than someone with bipolar disorder.

3) I've seen DOA dual core \$40 AMD processors with more processing power than this piece of shit program.

4) I have also seen people in the late stages of Lou Gehrig's disease with more punching power than this.

If you want my honest opinion, with the \$10.00 you'd spend on a one month subscription you'd be better off going to the store and buying powdered clorox and butt chugging it. As you fade into the darkness remember on the contrary, this is the shittiest product to ever hit the slums of HF. Yes it will work but to what extent? Will it confirm the password but then trigger twitter to lock the account? Is this silent?

**rockmonkey** - September 20, 2015, 11:05 am

How exactly does it work, are you just gonna bruteforce your way into any account or what? Or is it just form of exploit?

Is there any way you could explain how it works without revealing too much? i.e in theory if you could access any twitter account with this method you could, say, grab Justin Biebers account and use it for spreading.

I am by no means implying that this is bs, but I hope you can understand why I am sceptic.

It is a dictionary attacker + combo attacker.  
I don't know what more you want to know.  
Yes, I there is custom coding and bypasses involved to avoid blocks etc.

I hope you understand why I don't want to elaborate on that.

**Supremed** - September 20, 2015, 12:19 pm

Is there a spot where you can enter in a username and a list of passwords comes up?

Thank you for the swift reply. ?

Let's say you get the right password, taking for granted that most twitter accounts have some sort of verification, like a phone added to it. Is there a method included to bypass these block(s) as well, to make you appear as the rightful owner when trying to log in, or do you have to settle that part on your own? (I assume that this is what the HQ proxies are for)

Famous twitters would probably be harder to hack and most importantly, very risky.

Of corse, never tried the twitter hacker so don't take my word for it ok. It may be a wonderful application but from other experience i don't believe any of these work.

Apologies if this has already been asked on one of the other pages, but I take it this tool doesn't bypass the page which requires you to verify ownership of the account by requesting an email to be sent to the email address associated with it? I have the password to a fine-ass, original Twitter handle, but unfortunately I can't for the life of me figure out what the email address associated with the account is because it's blocked with asterisks. Cheers.

There isn't any program that can "immediately" get a password of someone unless you have them as a slave in your rat
