Thread: [Zacs Tools v0.4 RESOLVERS, PINGERS AND MORE! \[NEW\]](#)

Velocity™ - May 22, 2015, 5:12 am

<----->

Zacs Tools v0.4

The ultimate tool for all your sneaky needs :)

<----->

Current Features:

- Skype Resolver
- Dictionary Lookup
- Email 2 Skype Resolver
- Website Pinger
- URL Bypasser
- URL Screenshotter
- Loads more updates...

The Information

This beauty was coded in C#, one of my first few projects.

Fairly simple, console application.

Credit goes to api.c99.nl for the API use.

How to get?

Only giving to a few members as of now (free of course)

Just message me saying you want one and Ill give you the download, virus scan and a screenshot :)

Be sure to post back your thoughts!

Fantasized - May 22, 2015, 5:13 am

Pingers ;)

Could I have this? Thanks man

Sent a PM.

Let me know how it goes ^-^

Still giving this out.

CodeAssassin - May 22, 2015, 6:06 am

This is so basic, you never even coded it all the work was done by the website, and you want people to pm you for it gtfo.... Hahhaha

Example Resolve ip

```
Code IPHostEntry host = Dns.GetHostEntry("www.google.com");
Debug.Print(host.AddressList[0].ToString());
```

EDIT: Sorry i was a little harsh, Just hate seeing other people use other peoples work as their own (you just made a basic ui for this guys work/website)and then making people pm you for it like it was the most secret app coded ever lol.

Velocity™ - May 22, 2015, 6:28 am

Well no, the main reason I make people pm for it, is because I can't post links yet but I can through pm.

Makes it easier and hense why I send screenshot through pm.

Comedic - May 22, 2015, 6:32 am

Looks nice, good share mate :)

CodeAssassin - May 22, 2015, 6:34 am

Then i apologize a few people will find a use for your app im sure :)

nepHaXOr - May 22, 2015, 6:39 am

I want to have this :: Thanks man.....

Velocity™ - May 22, 2015, 6:46 am

PMed you bud, thanks for checking it out :)

if not true then false - May 22, 2015, 8:51 am

If you can't post links just put spaces in the link so the filter doesn't notice it, you won't get a warning if it's for a legitimate reason.

Drug ballad - May 22, 2015, 12:52 pm

This must be some kind of fucking joke? First of all your program is pure garbage and this is what every single wannabe skid makes and post. Why in the flying fuck would you post this and even worse, act like it's something good, useful and not made by a 12 year old skid wannabe.

People like you need to stop and realize you can't code and if you truly want to get good at coding, you will have to download a .net book or go to some coding class. What you are doing is making complete copies of skid programs that you see in the hacking tools sections and youtube. You need to start learning, memorize and start building an "database/bank" of knowledge and code. Of course you can't know and memorize everything so searching for help is okay (IMO) but learn from the code and go through it.

- I'm saying this because people need to stop this. Your tools are worthless and is pure shit. Don't take it too hard though, I was once somewhat like this, thinking I could code and shit when I was actually shit at it and whenever I had to write more complex shit beyond the basic stuff, I googled and copy pasted. I didn't read nor try to learn from the code which I had stolen, I just c+p and changed stuff in it. I posted shit applications on HF which had been made 1000 times before and better. After like 2 years of being a shit LQ skid, I finally downloaded a .net learning book and whenever I had questions or problems I asked my step-dad for explanation and help. He is

head-leader & coder of the Tobii advertisement eye tracking project and can code fluently in a few languages (can't remember exactly which ones but I recall seeing him code in C# and some language starting with C, probably C or C++).

It has been like 3 years since I last touched .net and first now about 4 days ago I had got an idea of a program, I wanted for personal use. The thing is not to create a lot of shit applications that are really just copies of shit you see online. If you don't got a good idea for a program the best thing to do is just to not do it or do it and keep it for yourself.

- Sorry for the long reply, I'm on 100mg dex-amph so can't help it lmao

100mg of dexy? you're insane. 15mg of adderall and my limbs go numb!

On topic though, I won't use this program. The name of it is fucking unique though.

Velocity™ - May 22, 2015, 3:58 pm

You know.... SOME find this useful.

I have gotten over 20+ PMs about this.

CodeAssassin - May 22, 2015, 4:06 pm

You will find these are the noobs... who either can't code or are too stupid to learn :(

None of the better coders will have downloaded this.

if not true then false - May 22, 2015, 4:16 pm

This, honestly. Tools like this don't even deserve their own thread; programmers who actually know what they're doing don't need to rely on something this low.

Velocity™ - May 22, 2015, 4:50 pm

Look, there is no RULE or STATEMENT saying that I cannot post this for noobs.

This program is aimed at noobs, of course better coders will not download this.

IT IS still useful to certain audiences.

Coders who are better than noobs, DON'T immediately say this is useless/garbage because it is to YOU, not to OTHERS.

This was not aimed at people who can code good.

if not true then false - May 22, 2015, 5:38 pm

(May 22, 2015 04:50 PM)GoEncrypt Wrote: [\[CITE\]](#) This program is aimed at noobs, of course better coders will not download this. Then don't fucking put the [Release] prefix on the thread. Random scraps of source code for people to reference in their own code should be marked with [Source].

And people like you need to stop. The guys learning, and he feels accomplished. Don't act all high and mighty because you know more, and see this as low shit. He's fucking learning. For god's sakes, take a fucking chill pill ?

Yes, let's see when you come out with a project and someone higher than you talks shit about it.
