Thread: [Help me, didnt pay me for the website creation service!](#)

host.corporate.br - May 22, 2015, 6:23 pm

I'm a old website developer professional, start in 1996 but using ASP techs... today i work with PHP but with CMS and I'm not so expert on that.

Last month a company [www.DOT UNISTEIN DOT com DOT br](#) didn't pay me for the job, and they realize will not be able to host my developed website on another host because I did encode some PHP script to avoid problems with payment. Well, they just didn't pay me and after a lot tries they turn to work with another web developer and don't pay me.

I'm really upset about that, I want to get in their admin console to teach that Big Company money is not everything!

Can somebody help me on that, I already try to use some beginners software like SQLIHelperV2.7 but didn't get any thing?. Please, I really think they deserve that?. The URL is above.

Admin, sorry about the url but I need to inform helpers. Please don't punish me.

Regards

You are a old developer, you said you know php but you dont know sql injection? Or any other vulnerabilities ?

DivineLegacy - June 3, 2015, 10:02 pm

Yeah, OP, you wrote the code, you have the best chance at exploiting it. Do you have any backup files of the php code you wrote that I might be able to analyze?

Edit: This is a Wordpress site. Which part of it did you actually write... or did you actually write any of it?

darkelite187 - June 4, 2015, 2:19 am

does seem if he makes websites he would know about all this eh

also if u used cms its like php nuke but more easier u at to upload it for them and set up the db right and u needed to upload that using ftp or the hosting would have it that software that would of set it up for him anyways like phpbb and php nuke etc but guessing the hosting did not so u set it up wait a min if u did set it up u would know the admin password anyways u wound off at to put it in if u didnt it be admin password be pass anyways in less u re did that part so sorry i dont think u u kinda lying to us

srry20wnu - June 4, 2015, 5:10 am

oh baby, yes, that english tho.

darkelite187 - June 4, 2015, 5:42 am

what ever u been smoking i like some lol

SIM-209986 - June 4, 2015, 7:39 am

LOL.

> Code site himself

> Ask to hack it.

You know the holes better than anyone else. Good luck!

kapone - June 4, 2015, 7:40 am

Just exploit the site. Blast it with bad seo.

Th3PonyWizard - June 4, 2015, 7:43 am

If you don't know how to hack even to the theoretical extent, you probably don't know how to write secure code.

If you don't know how to write secure code, you make vulnerable sites. Find your holes.

kapone - June 4, 2015, 7:45 am

i can help you guys out if you would like. got uber skills

Lorenzon - June 4, 2015, 7:48 am

If even you think that the code YOU have made are vulnerable, tbh you don't even deserve a payment.

darkelite187 - June 4, 2015, 11:44 am

btw the domain u posted is up to bye by the hosting lol

haxedsh1t - June 5, 2015, 2:42 am

How could I know if there is a vulnerability in my own code? If you write something you try to make sure it is not vulnerable..

When you were creating the site, you probably know what plugins are installed on wordpress. Try to find an exploit for that online (could be already outdated by now)
