Thread: [RAT Expert | Port Forwarding Pit Stop! | Solve all Port Issues | DNS Setup | TV Help](#)

Business - May 22, 2015, 10:31 pm

Are you having trouble connecting to your test computer? Can't figure out what's wrong? I am here to solve all your problems, and rid you of all your worries.

I am very experienced with RATs and port forwarding, so you can rest assured that I know what I am doing. I have been experimenting with these tools for many years now, and I even earned the "RAT Expert" award from Hack Forums.

What exactly will I help with on this thread?:

Port forwarding

DNS Setup

Firewall Issues

Setting Up VPNs (Any)

How do you ask for help?

Did a good job helping me with a couple of issues. Thanks, bro.

VirtualMon3y - May 23, 2015, 11:24 am

Hi Business,

Seen your activity and rep on here a lot and you seem like a real HQ guy. Is this a paid service or a free thread? I posted a thread easier today and got no responses. It's a VPN issue so if you don't mind I'll re-post it here for your feedback. Cheers!

Hi,

I am using OpenVPN or NvPn (I have seen it called both) as my VPN service.

Also using free DNS with their app/program to update my ip as it changes.

If I log on the VPN, then turn on FreeDNS, then NJRat my server is not showing up. There is no connection....

The fix I have found for this is to turn off FreeDNS, Go to their website and manually put the allocated IP that NvPn has given me that can be found in the system tray icon (this is the IP given to my device not the IP address I have when checking it on a "what is my IP" website)

Then I can turn back on FreeDNS. The connection to server continues but I can remote view or access the zombie computer. I have to close down NjAt, then turn it back on again and the server/zombie then re-connects...

Does anyone have any suggestions as to why this may be? I can see to work out a logical way or reason why this happens and it's annoying me...

I used to use PIA which worked fine and never did this. PIA however only supported port forwarding one one port which they randomly changed every few weeks so I got rid. Is this an issue with the VPN I am using maybe?

Thanks!

os is windows 7 64bit
VPN is in text above Nvpn
Rat is NJRat

Business - May 23, 2015, 12:02 pm

If you want me to remotely assist you let me know, I am sure I can fix it.

Hi Business. ?

I feel embarrassed addressing someone who seems so knowledgeable to what I think is such a simple problem.

I know the basics of RATs and how to port forward, even used VPNs and that before.

But I recently switched my ISP, and although I have gone in to my config and opened ports etc, its still testing as a closed port?

My hardware is simply called a Smart/RG ? Its a modem/wifi routing hub from what I can tell.

Can ya give me a hand maybe?

This is my first post, I think my accounts limited, but any help is appreciated.

testboi - October 6, 2018, 4:23 pm

yea i opened anydesk just waiting for u to connect

CrystalFlare - November 8, 2018, 4:15 am

i'll leave you a PM thank you for this thread OP

AccessVerified - November 12, 2018, 1:25 pm

I would like to communicate with you, could you give me your skype

johnduff - November 15, 2018, 3:03 pm

Hi there, thank you for this thread.

I need your help to set up my rat if you have some time, please.

Issue: I fallowed instructions here and open ports both on my router and my vpn, more my firewall shoud be off but can't hear anything on canyouseeme.org which respond "connection timed out" or "connection refused"

OS: Win18 on a VM (Oracle VirtualBox)

Using a router or VPN: using a router and Cryptic's VPN

RAT: #

Thank you for your time OP.

Business - November 15, 2018, 3:48 pm

Yes please. I can't PM you but I can give you my skype if i'm allowed to. Thanks again for willing to help.

Veaxz - November 18, 2018, 8:37 am

Maybe you can hmu on skype, I know how to portforward and all but when I check my port it isnt open. My skype is: live:bas.wolfswinkel1403. I dont know what I am doing wrong so maybe I can screenshare

R4NS0M - November 18, 2018, 10:01 am

Hello Business

Thank you for helping people.

Issue: Clients not connecting.
OS: Windows 10
Using a router or VPN: CrypticVPN
RAT: Orcus RAT
DNS: Armada's Secure DNS.

Pseudonym_96 - November 22, 2018, 6:37 pm

Hello, I am having some issues port forwarding and I stumbled upon this thread. Me and a buddy can't figure it out, so I was wondering if anyone here would be able to maybe shed some light on what is possibly going wrong?

Issue: Set up port forwarding on my router and the port is not seen as open/ when it is seen as open, I cannot get anything through it
OS: Windows 10
Using a router or VPN: Router
RAT: Quasar
DNS: No-IP

Business - November 22, 2018, 6:59 pm

Thank you so much! I am definitely willing to change over if it works haha, also, I don't mean to step on any toes or question your knowledge on the subject or anything, but what is the difference/benefit to switching from No-IP to Freenom?

Business - November 22, 2018, 7:33 pm

After things like this, I tend to stay away from a company... even if I am only testing locally.

<https://www.noip.com/blog/2014/07/10/microsoft-takedown-details-updates/>

oh wow, I was not aware of that at all haha, thanks for pointing that out! I will make a freenom address now, does the domain matter? or will any of the free options be fine?

Also, it's asking me for like, my address, my phone number, and all this personal information. Should I be entering it here if I am about to run a RAT?

Business - November 22, 2018, 10:00 pm

(Nov 23, 2018 03:06 PM)Armada Wrote: [\[CITE\]](#) Have you attempted "Bridged Networking" on your virtual box?

Yes Armada, it is set up like this. Thank you for your concern.

- 1) I opened ports (TCP+UDP) on CrypticVPN and followed their tutorial with 10.8.x.xxx - I can choose any port between 2000 and 3000 right ?
- 2) I opened same ports (TCP+UDP) both incoming and outgoing on my firewall on Windows Defender both on PC and VM
- 3) I opened same ports on my router/internet supplier with my ipv4 192.xxx.xx.x - my vpn is connected on the same country that decided when i open ports in 1st step
- 4) I launch listen.exe, type my port and click listen
- 5) I go on canyouseeme.org and have "Error : Connection timed out"

Thanks for your help. Cheers

Armada - November 23, 2018, 5:56 pm

(Nov 23, 2018 06:49 PM)johnduff Wrote: [\[CITE\]](#) Yes Armada, it is set up like this. Thank you for your concern.

I get the distinct impression the problem is somewhere between your routing and forwarding to your virtual box.

johnduff - November 24, 2018, 6:16 am

(Nov 23, 2018 06:56 PM)Armada Wrote: [\[CITE\]](#) I get the distinct impression the problem is somewhere between your routing and forwarding to your virtual box.

Probably, I have no idea. Even when I don't use my VM nor VPN it doesn't work. I only open the correct port with the TCP listener.exe and go to canyouseeme.org and I have the same error message ?

Can someone check this out please ?

Armada - November 24, 2018, 10:17 am

Thank you very much for your proposal Armada, i really appreciated.

Unfortunately I can't PM you for now. Can I give you my credentials other way ?

Hope you will be available later. Regards.

Gerymc - November 24, 2018, 1:26 pm

Whenever I test my stub, it doesn't connect.

I had it working last night and I am using the same VPN, port, and socket but now it won't connect. I tried using it without my DNS (I made sure my IP didn't change) and even then it still doesn't work. Canyouseeme.org shows the port as open, too.

Windows defender is off and when I check after I launch the stub, it isn't showing anything bad.

Ignore my previous post. I wasn't running as an administrator... my apologies

Business - November 24, 2018, 1:32 pm

I definitely will be coming back to this. I heard good things about the OP.

OP, let me know when your available. I have a RAT connection issue I want to solve.

ping010101 - December 15, 2018, 10:14 am

op can you help me out how to set up a namecheap domain as an ip updater for orcus server! should i add my public vpn ip to the namecheap record for A+ dynamic dns then put the same ip on my orcus server beside the port ? thank you!

Angelis - December 15, 2018, 12:44 pm

(Dec 15, 2018 11:14 AM)ping010101 Wrote: [\[CITE\]](#) op can you help me out how to set up a namecheap domain as an ip updater for orcus server! should i add my public vpn ip to the namecheap record for A+ dynamic dns then put the same ip on my orcus server beside the port ? thank you!

Point the domains A record to the VPN IP# and then the DNS host name in the Binary client of the software.

Linueax - December 15, 2018, 1:53 pm

I Need Help with Spreading the RAT and how i can makt that that the Windows Defender doesnt see my RAT as a Virus

Your confusion seems to be within the networking my friend.

So, lets eliminate the DNS all together.

You have (You said Orcus, right?)

[Client] <>[Server]<>[Client]

The end game here is to get your client to connect to the control C&C, correct?

The DNS at this point is an "Easy routing point" nothing more.

So, where I THINK your problem lies is in the fact, your Routing is not "Kosher"

Remove DNS, test using IP# only see where the host fails, this will eliminate most problems.

CatLicker - December 16, 2018, 4:03 am

Issue: port forwarding doesn't seem to work. Tried disabling my firewall still not working,
My isp say that they are not blocking any ports

I don't think I was able to see any ports open when I used canyousee.me. I tried a port listening tool and it the port seemed open.. Is there a different ip I should try?

CTRX3 - December 18, 2018, 12:16 pm

Should it work with all dns services or just no-ip?

Angelis - December 18, 2018, 3:12 pm

(Dec 18, 2018 04:04 AM)ping010101 Wrote: [\[CITE\]](#) thanks mate, the only issue that I have is how to put my NameCheap domain name as a DDNS to my RAT! so i won't lost connection if the IP changed , what should i put on the A Record and while I'm creating new server on Orcus, should i put my on domain name , internal IP, external ip ? appreciate your feedback!

You would enter the IP# in your domains A Records, and input the host name (Domain name you set) in the Binary build.

That way if the IP# ever changes you can update the A record instead of losing all your clients.

(Dec 18, 2018 01:16 PM)CTRX3 Wrote: [\[CITE\]](#) Should it work with all dns services or just no-ip? Do not use No-IP, they honeypot and will get your banned/loss of clients.

Ensure your RAT is actively listening on the port and test using canyouseeme.org

If it tests closed, your port forwarding attempt has failed. If it tests open the problem with connectivity lies elsewhere in the topology.

DNS is where you want the infections to connect too. So if you have a vpn you would point the domain or np-ip or duckdns to the vpn ip and you would get your infections. Keep in mind no-ip & duckdns were just examples i do NOT suggest using them for ratting purposes.

Hello

windscribe static ip port forwarding error. Please help Friends

stevieblanken - January 23, 2020, 2:32 am

Having problems keeping clients don't know if i am doing something wrong. I sent the virus out got some clients, They keep appearing and disappearing and now they are all gone. At first i thought it was because i sent out my file 1day before the crypter was updated. Waited till the new update came out. Still the same result they appear for a minute and gone the next appear and finally all gone.

WARZONE RAT BUILT(settings)

Win 2012r server RDP;

check -offline Logs

check -persistence/watchdog

check -enable UAC Bypass

check -Bypass windows

check -Listening port ON

1. tried building without NoIP or Vpn. checked if the ports is open on | <https://www.canyouseeme.org/> (port 5200 is open)
2. tried using noIP ddns host name still the same result | <https://www.canyouseeme.org/> (port 5200 is open)
3. i used the IP address of the OpenVPN(vpn.net)and port forwarding port 5200 still no luck <https://www.canyouseeme.org/> (port 5200 is open)

Please help i really dont know what i am doing wrong, apart from the clients disappearing. Every other feature works flawless when tested on VM.

NOTE: cant PM yet

Thanks

Manda_Metter - January 26, 2020, 3:34 am

Issue: I've built the rat but whenever someone opens it, it doesn't connect to the client. I've tried to open ports through the firewall with the firewall security off as well. I've also gone as far as doing it inside the router itself and doing it without noIP or a VPN. I've checked with some port-forward checker website and I don't know whether to use the IP in ipconfig or my external IP, I've tested both to no avail. I'm listening on the port "10134" and I've tried other ones to no avail as well. I'm stuck at this point and don't know what to do, if you want to reach my personally my discord is listed below.

OS: Win10

Using a router or VPN: router

RAT: Quasar RAT

What's the best free RAT and Crypter? can someone please tell me or direct me to where I can get it? Thank you so much

kabus_code - February 15, 2020, 1:23 am

Vouch for Business. Solved my issue. Thanks for this free and excellent service ?

Patrick Haas - February 15, 2020, 10:05 am

Issue: Searching good DNS

OS: windows 10

Using a router or VPN: nVpn

RAT: Android Tester 6.4.6

Would a VPN be better? Considering to get one. But what are the chances that it traces back to me? o.O

I cant be assed to re-type the info, its not my fault you can not use the search function.

Skiddos like you make the rest of us look weak. Its f*cking pathetic.

computer? Can't figure out what's wrong? I am here to solve all your problems, and rid you of all your worries.

I am very experienced with RATs and port forwarding, so you can rest assured that I know what I am doing. I have been experimenting with these tools for many years now, and I even earned the "RAT Expert" award from Hack Forums.

What exactly will I help with on this thread?:

Port forwarding

DNS Setup

Firewall Issues

Setting Up VPNs (Any)

How do you ask for help?
