Thread: [\[VB.NET\]USE CONTROL without add it to Form "TIMER"](#)

xVipX - May 23, 2015, 7:06 am

hi today i will show u how to add timer to u project without add him into form
it very easy -_-
Code DIM WithEvents Timer1 As New Windows.Forms.Timer

```
' Now Add sub with any name
sub tt Handles Timer1.Tick
' Timer Code Here
End Sub
' On Form_LOAD add Timer1 Setting
Timer1.Interval = 10000
Timer1.enabled = TRUE
gl
```

If you need to create a thread just to explain how to write an instance variable, than you'd need at least a hundred lorem-ipsum sized paragraphs to explain what 'public' means. Also, apart from your english, what does the "-_- " have to do with the thread...

It shows he is negative about the community not knowing how to write timers without using the control.

Also since you appear to be ignorant about Access levels in VB I highly recommend you redirect your self to this url location.... -_-

msdn.microsoft.com/en-us/library/76453kax.aspx

Edit: Lol OP added code to the OP. I really liked the gif though D:
