Thread: [File pumper always detected](#)

whitemask - May 23, 2015, 2:10 pm

hello everyone , i got many codes for file pumper ,,but always detected by AV (avira & kaspersky) ,, that is the code i use

```
Code TextBox1.Text = "E:\6.exe"
```

```
Dim out As String = "E:\6_m2.exe"
```

```
IO.File.Copy(TextBox1.Text, out)
```

```
Dim filetopump = IO.File.OpenWrite(out)
```

```
Dim size = filetopump.Seek(0, IO.SeekOrigin.[End])
```

```
Dim filesize As Double = (10 * 1000) + size
```

```
While size < filesize
```

```
filetopump.WriteByte(10)
```

```
size += 1
```

```
End While
```

```
filetopump.Close()
```

```
' MsgBox("Successfully Pumped!")
```

i try to change pumping size no matter small or big it will be detected !!

by the way the main goal ,i wanna change file signature so i got some ideas to do this :

1)file pumper -detected-

2)assembly info changer -the code i got not stable-

anyone give me more ideas ,thanks ??

If you have the same repeated bytes, it's very obvious to an AV program that something is wrong.

Hoody - May 23, 2015, 2:52 pm

ideas for changing the file signature...

1) append a single null byte to the file. wont be detected

2) write in the null spaces of the DOS and PE headers. might cause detections... idk

3) add a resource (with winapi) <- probably gonna be hard if your new to programming

4) edit the manifest

5) you could also just change one byte in the icon.

hopefully i gave you some helpful ideas. i realize some of them probably aren't practical... but whatever

thank you very much ,adding null byte is perfect !! ??
