Thread: [\[Minecraft Client\] Looking for someone to code me a ghost Client](#)

xUnlock2 - May 24, 2015, 12:05 am

Hi,

I am looking for someone to make me a client straight from scratch, I am talking about a ghost client(client without gui or theme). the client must be accessible in singleplayer using the "." to execute commands. It must be compatible with forge.

Client must include :

- Triggerbot (with changeable reach)
- Knockback Adjuster
- Aimbot
- Toggle Sprint (like what the Togglesneak mod does)
- Text Editor to make text appear on the screen for example if I wanna type in the left corner "Sprint[toggled]"

- Panic Button (if getting screenshared I can just type like .panic in multiplayer and it disable every commands from singleplayer and such, so if I got in single player it'll be normal again)

- Disguised as toggle sneak
- Undetectable by kohl and Badlion's anticheat

Finally I am willing to pay money, you name your price or send me a pm with information to contact you such as your skype !:)
