Thread: [\[NEED HELP\] NEED REAL IP OF A CLOUDFLARE PROTECTED WEBSITE](#)

Learner Boy - May 30, 2015, 5:57 am

Hi, there I found a website but its well protected by Cloud-flare.

So I get the cloud flare's IP every time I try to DDos it or something and it doesn't work.

I have tried virtually everything ranging from finding IP histories of websites and other methods.

Anyone here who can help me with it ?

Post here if you are interested, I will PM you the website link.

Regards

Learner Boy ?

Does finding a website's IP which is behind cloud flare means you are going to DDos that shit?

Don't be a skid, get the hell out of my thread

Lol, that's most likely the case. I believe you said it yourself in the OP...

Yeah I said that, but I really wasn't going to DDos the website. DDos isn't the only option you get when you find a websites real IP

I was having trouble finding its real IP which was behind cloudflare.

Thanks for pointing that out ?

I am not asking you to DDos the website, I was just anyone here to find the real IP of this website. DDos isn't the only option when you find a websites real IP.

The "skid" you said here symbolizes you unfortunately.
