Thread: [\[TUTORIAL \] View Restricted/blocked sites without PROXY & VPN](#)

The_Messenger - May 31, 2015, 9:40 am

Hello, this is my first post in this section so sorry if i break any rules or something
This is not hacking, its a process to bypass websites firewall and restrictions.

About The Process

This Method or Process is called "Indirect Browsing". The term "indirect browsing" refers to the other server which you connect to. During "direct" browsing, you connect to the server which provides the resource you are requesting. During "indirect" browsing, you connect to the server of a middle man server. Then The Middle server script downloads the requested resource and forwards it to you. (or in simple words its a web proxy)

How To Do it

This is very simple, just visit
Quote: <http://unblockthatsite.net>

Now, simply type the link of the website you want to visit and hit Go. and you are done.
You also get some options to customize your pages like removing script, encrypting url.

Tip: if you want to be anonymous then deselect allow cookies option.
and yeah these websites have few ads (mostly girlfriend finding sites) which can be annoying.

Benifits of this method

1. Open Sites like FB, twitter which are blocked at your work and School.
2. open blocked or restrcited sites in phones without setting up proxy and vpn. (or maybe in a friend or a family member phone).
3. And the Best one, Open Multiple accounts in a single browser. (you can open FB, twitter, gmail..etc a/c) Tested.

Login to your site. then to login to same website simentounasly open the above site, type your site link and hit enter and login.

Congrats you have finished the process. Hope you Like my tutorial. Please leave feedback about this below. Thanks.

As i said above, this is a temporary method and not require vpn! So its convinient

PureLifeCoding - May 31, 2015, 10:09 pm

This site is literally just loading the website under a proxy. Which by the way is really unsecure due

to the fact that anything you do can and most likely is monitored by that website.
