so this turns your rat into a pdf file? is it hidden execution?

ruGaming - June 1, 2015, 6:30 pm

I would love to see what this entails. Let me know if I am worthy to read over this as a review/vouch copy.

It makes your RAT exe file into a PDF. Meaning, when someone opens that PDF file It'll infect them. Fully undetectable.

SupremeBot - June 1, 2015, 8:13 pm

Vouch for this ebook, OP always makes HQ products.

The Scarabian - June 1, 2015, 8:15 pm

Could I get a vouch copy? I will do run-time tests on 8 different antiviruses.

Still considering people, I'll let you know if you're accepted. ?

Raymond Reddington - June 2, 2015, 7:40 am

If any vouch copies are still available, and you deem me worthy enough, I will take one.

RagZorro - June 2, 2015, 8:09 am

In the description you have written "we are giving free method to turn your payload into a working and functional PDF file" So why the hell you sell it ?

On what pdf versions does it work? What is the current status of FUD. What language is coded?

As you can see, we're not selling the PDF exploit, we're selling the spreading method and it comes along with it. Works with 1.7 and is full FUD. No coding is involved.

Wait, are you not selling PDF exploit? Will I be able to convert my EXE into PDF like the silent Doc exploit?

If that comes along with it then it MUST be coded in something ? Dont you know you have to put information and full details about it ?

Works with 1.7 ? What is 1.7 ? Tell me specific PDF viewer because I never heard about something like 1.7

If you aren't selling exploit remove all words contain it because it confuses members and changes everything at all.

A PDF exploit is included, but is not what is being sold.

OP seems a bit fishy. a PDF exploit builder costs around \$1500 and IDK why he is selling it at \$25.

I'm not going into full detail, otherwise it would expose the exploit. You're opinion has been noted and title changed.

In the thread it clearly states a method is being sold, and a exploit is included.

The title was incorrect and could be misleading and that's why I changed it.

So you do not selling exploit but some ebook.

Take a look at this section:

No, hes selling a spreading method. The PDF builder is just an addition.

Is the PDF builder Functional? Can I Embed my EXE into PDF and when PDF is opened it silently launches the exe?

Does it work like Doc Exploit Builder?

Does it work like Doc Exploit Builder?

The exploit is fully functional, and the EXE is triggered upon execution of the PDF.

OP then tell me what language is pdf "builder" coded in. What versions of what PDF viewer is vulnerable and finally send us scan results of it.

If I was to give a video tutorial on how to use the exploit, it would defeat the whole purpose of it being unsaturated.

Like I said, showing you the exploit or the programs used would defeat the whole purpose of it being unsaturated.

Please keep in mind, It's the spreading method that is being sold not the PDF exploit.

I will not be showing or giving support on the PDF exploit, due to It's not what is important or being sold. I'm done speaking about the PDF builder. It's a free method included, not the main product.
