Thread: [hacking girlfriends facebook/yahoo email](#)

cindymajak - June 2, 2015, 1:17 am

Hey guys, i have few questions.

I am trying to hack into my girls account on FB, ive been trying different methods.

I was trying that facebook password sniper but it requires you to fill out surveys.

I dont have access to her computer and most of the time she just uses FB on her iphone. Is there anyway to send her an email of a message with some kind of keylogger or something? Whats the easiest way to get her password? I tried reseting it, i know her email but i dont have yahoo email password.

If anyone can hhelp me, id really appreciate it

cindymajak - June 2, 2015, 1:47 am

i dont have access to her network, we dont live together yet, but when she comes over, her iphone is connected to my network via wifi, is there any way i can use this to break into her phone? Wouldnt it be easier to get her password for her yahoo email and then just reset the FB password? im a beginner btw lol

First off are you a stocker man literally who the hell want to worry about a girl so damn much.

FaidedShadow - June 2, 2015, 2:17 am

The guy is asking for advice, not your crappy useless opinion.

cindymajak - June 2, 2015, 2:17 am

guy that just proposed to her. i know shes got her secrets lol

thank you FaidedShadow

??\$?? - June 2, 2015, 2:18 am

You shouldn't be wanting your girlfriends password. If you think the hoe isn't being loyal, break up with her.

Shut up kid, you're probably 12. Go back to watching your hacking tutorials on youtube.

Shut up.

OP, Doing this to your GF is wrong, think she's cheating? Man the fuck up and ask her, if she doesn't wanna tell you, dump her. A standard "No" means you should calm the fuck down, you should be trusting her since you two are in a relationship. "Hacking" her Facebook or Email would be so wrong on so many levels.

A question goes a long way.

EDIT: I've had access to all of my Ex-GF's Facebook Accounts, mostly on their phones. Not because i hacked them, but because we trusted each other with them. Jealousy is also a fucked up thing.

cindymajak - June 2, 2015, 10:20 am

ok lets say its not my GF, lets say im trying to get some strangers FB password. is it possible?

jameswatt17 - June 2, 2015, 10:21 am

On your main, grind to 72 slayer and do wyverns, you can easily a ton of money there, and if you get lucky you might get a visage.

72 slayer shouldn't take long, maybe 1-3 days of 4-6 hours playing a day

bZ_N - June 2, 2015, 10:21 am

You are such a skid, jesus christ.

Hacking into facebook? Really m8? Also, you are a total fucking pedo btw.

Use some shit called..... GOOGLE

YeahOk - June 2, 2015, 10:25 am

You proposed to your GF and now you want her passwords, holy shit man sounds like a great relationship. You made all the right decisions...

vedasamsara - June 2, 2015, 11:12 am

Install a keylogger on your own pc. Tell her you're having problems logging into yahoo, ask her to try it and see if it works for her. Now you have her password.

AnonymousPlayer - June 2, 2015, 11:22 am

Option 1: Smart

Stop being a little bitch and talk to her. Hacking her won't solve your problem. It'll probably make things worse.

Option 2: Retarded

There's hundreds of tutorials in the tutorial section about email hacking, and facebook hacking. They're all very similar so here are your choices:

- Install a RAT onto her computer
- Get onto her computer, extract the cookies and login at a later date
- Bruteforce her password

There are many more methods than listed, but these are probably the easiest. Do some work and search for tutorials. Hacking really isn't difficult it just requires an investment of time and patience.

Wish you luck sir. ?

Mr. Robot - June 2, 2015, 11:24 am

Best way to do it is just run kali linux, download hackpack or lazykali - host a facebook login page and dnsspoof all traffic to that allowing internet access after they have signed in ^.^

Also this is a great method to use on a biquad antenna or just to run on your laptop while you drive around :)

Sit outside a highschool. LMFAO call your wifi hotspot something like "town free wifi"
