Pretty self explanatory, you enter a generator link where it will generate just one account, it grabs as many as you want off that link, no duplicates.

Works almost instantly.

Programmer: [Dr.Seuss](#)

If there are any questions related to this feel free to ask me. ?

I programmed this real swift just for myself after I found a leakable site, so it's no fancy code - just doing it's job. ?

CodeAssassin - June 2, 2015, 10:03 am

Sorry what's it supposed to do as all i see its doing is adding every pages source code to a file..

Correct me if i'm wrong.

EDIT: And op why say no duplicates when there is not a single line to handle duplicates of anything

unless you uploaded the wrong app

```
Code URL = textBox1.Text;
    limit = Convert.ToInt32(textBox2.Text);
    for (counter = 0; counter < limit; counter++)
    {
        using (WebClient client = new WebClient())
        {
            htmlCode = client.DownloadString(URL);
            caught.Add(htmlCode);
        }
    }
```

```
FileStream fstream = new FileStream("UserPassList.txt", FileMode.Create);
    StreamWriter swriter = new StreamWriter(fstream);
```

```
    for (counter = 0; counter < caught.Count; counter++)
    {
        swriter.WriteLine(caught[counter]);
    }
```

```
swriter.Close();
```

That's correct!

If you have a website which always grabs 1 Account from a DB and displays only the User:Pass on the page you can use this program to suck empty the DB.

It saves the Source of the Website which is only "User:Pass" then refreshes and does it again.

Like I said, this program was originally supposed to only leak one DB I found online which was corrupted like that. (Netflix Gen)

I never thought of sharing it that's why it's so ugly. ?

Agent Raigar - June 2, 2015, 11:03 am

I can't be bothered to check out the source but I can tell it's not multi-threaded and any decent coder would have protected his PHP generator script one way or the other.

Ah i see, this is the info were missing in the OP post.

To know it should only receive a User:pass type of output would of been handy. Tbh i don't know of any site that outputs info like that tho.

thats what almost every account generator in the market place is using. its just too easy to split strings like that, why go and do anything additional.

I programmed this real swift just for myself after I found a leakable site, so it's no fancy code - just doing it's job. ?

From a first glance, I see: empty method bodies, unused variables, redundant loop, initializing and disposing over and over. Acres of room for improvement.

How come you're not hosting the thread? I don't get it.

??? - June 2, 2015, 2:49 pm

I was asking my fellow pirates if sb needs Netflix :P

I told them I found a shitty protected Gen and wrote a tiny program to leak it real swift. :P

Because love I shared that shitty tool (Maybe sb also knows crap gens), Tick wanted to release it I said I don't care do it and welp here we are lel

This project is like my personal "cheating sheet" that I have been given around after I was done and now nobody can read my shitty handwriting ?

I know it's cancer & tumor combined x10 but hey, I got my DB ?

Ah i see, yeah i don't use any of those services, so that a be why lol. Thanks for the info tho :p

I give away this child, it's ur now ?

deiski - June 3, 2015, 3:37 am

Nice and simple concept, thanks.

nuk - June 7, 2015, 2:08 pm

I may check this out to see what it does LoL ... Apparently I just don't get what this is exactly suppose to do (even though it's been explained at least 4 times on this thread LoL). Either way; Thanks for the share OP! ;)

?????? - June 12, 2015, 9:33 am

Well we all know that [Dr.Seuss](#) is pretty talented

Xzedin - March 28, 2016, 3:45 am

I may be wrong, but is this now outdated as most generator sites use Captchas?

Odus - March 28, 2016, 4:49 am

Yeah, this assumes the page will spit out a combo each time it's refreshed.
