It would be better if possible to download https or socks proxys. Does this test proxys as well?

Quiver - June 18, 2015, 5:02 pm

I'm assuming this solely scrapes proxies? So a good amount of them could be dead when they're

scraped?

The program doesn't test the proxies but the sources that the program scrapes proxies from tests the proxies.

This only scrapes proxies but from sources that tests the proxies.

Due to limited information given to us by the proxy sources, this is not possible for all the proxies you scrape.

Scraped 13,530

Removes dupes: 2,424 remaining

Tested on my private checker

Results:

Overall: If you're lazy to scrape your own, this is a quick way to scrape proxies quickly and easily. The program is fast. I suggest a dupe remover to be implemented maybe on your next update. And also to fix what I mentioned above IF possible. Bottom line, for \$5, it isn't that bad. Maybe try adding more quality sources to scrape from. It has plenty of potential.

I have just tested the proxy scraper right now and I am seeing no issues. It will be frozen at around 70-80 proxies for a couple of seconds and then the proxy count will jump straight up to the 10000s range.

The problem itself seems simple tho.

The website you are scraping is having some kind of anti-scraper it seems like.

The proxies also needs ports, which is not provided in that file, which they should be - if I am right.

You should try a few other sites, just to see if it's the site you're currently using, that's fucked.

Just bought the product! Will update you with results.

Vouch for this seller and program. I received a serial code for the program instantly after purchasing it. Didn't need to set it up at all. A well-coded program. Scrapes around 3500 proxies for me. Would recommend other users to buy this program!
