Thread: [JDB and Clone Site whit Log.file](#)

RtXs-Error99 - June 4, 2015, 1:27 pm

Hallo Guys ,

First , were can i find actual JDB Files for the Upload?
and is there a need to be FUD or is it enough if my rat is FUD?

Second, i want to clone a site and log the User & PW informations how is this don?

Thanks for every help guys !!

Donations are given !

Java Drivebys are ineffective due to the new Java updates. However, you can still infect other individuals who are running outdated versions of Java.

You can use SET in Kali Linux.

Thank you.

Ok but what about just Log the User and PW on the Clone Site?

I find that a lot of people keep their Java massively out of date so this could bring some success

SIM-574702 - June 5, 2015, 2:58 am

90% of my school's computers have old Java because windows 8 doesn't allow users to update it and nobody is bothered to go around and enter admin password.

Is there now way to make a clone site on my on server, and log the Passwords and user names?
Whiteout using Kali ?
