That's original thread.

Supposedly Skype (MS) stopped offering the status feature.

<http://mystatus.skype.com/>

I've had to change the MyCode to be more simplistic and it removes actual status.

Now it's a button.

Code [skype]Skypename[/skype]

Thanks.

I use the purple theme, and you probably use the blue theme, I guess?

Omniscient - June 5, 2015, 1:30 pm

Fixed the Skype image to be a transparent gif.

Awesome man, this will make skype adding a lot easier, also it makes people find the proper Skype and not a fake one.

I cannot use it because I have a colon(:) in my Skype ID.

Stop sending me requests.

Let's test this.

The only bug is that Facebook:ID or Live:ID don't work with this.

Simple and clean! I like how it can be changed with the normal CSS.
