o/

Hello friends, essentially anytime I try to port forward on my ASUS router it is successful (or i think it is) then I go to canyouseeme and it doesn't show up, reason Connection Timed Out or whatever. Yes I am on a VMWare, using bridged networking.

I like doing it on a VM to keep it clean, also it is the latest version of DCR. I did the steps correctly from what I know.

No linking RAT like downloads or asking for teamviews.

Walrus Return to Base.

Make sure you are listening to the port on the RAT.

If this still doesnt work and you are 100% sure you did it properly on your router, Get a VPN. I personally use RA4WVPN since its fast, keeps no logs and has easy portforwarding.

Yes I am listening the port on the RAT.

And I am kinda broke to buy any good open ports VPN. From what I can tell, there are no 'Free' open port VPN's.

But thank you .
