You will need to obfuscate the source code provided to get a FUD result.

So you can make this FUD, which ill be adding how to do this when the updated version is out.

And I dont think crypters here output word files/xlsx and are able to handle them.

After reading and researching your previous track records (I wanted to know if you're a legitimate seller), I therefore conclude that you're really a legitimate seller. You've gotten like, a RAT award on your old account? That makes it even better. Better than those FAKE EBooks sellers that I've been purchasing somewhere.....even though they have an award but still sells FAKE.

Btw, does your EBOOK only works on RATs? Cause I have one program that is "very similar" to ratting but not really a RAT.

If I ever get the source code for the silent, I will be adding this to the guide aswell as explaining how to obfuscating the source to make it FUD.

Okay, so this ebook will be getting regular updates with just a one time payment, right? That sounds cool if it's true.

And just to understand the last part, if I use a FUD stub, the exploit will work as FUD right?

Yes you will get all updates forever. I plan to put everything I know into this book.

Yes you need a FUD stub for the exploit to be FUD.

And the source code needs to be obfuscated to be FUD.

Okay, I don't really understand what you meant by obfuscating the source for FUD, I just hope a crypter that makes my stub FUD, and then I shall use doc exploit, will keep my server and doc FUD. If that's not the case, let me know :)

It means making the source FUD. As the source code is detected by anti viruses, you'll need to encrypt the data displayed within the source code, so when you run the script (The source code) it will output a FUD file.

And your .exe needs to be FUD aswell. As the script basically binds your exe and outputs a .doc or .xlsx file from the code required to make the exploit. I explain how to create this within my guide, as it is used for my methods.

I purchased your guide and all of the methods are methods that are public and well known. I don't know how calling out a fake vouch is considered "sales trashing". Like come on, you are going to let people lie on your thread and then thank them for the fake vouch? It proves how low most of the ebook sellers are.

It's probably a .PDF

You will need adobe reader for it to work.

Search that on google and make sure the link is safe so you don't download some shitty virus.

Most of these methods are common knowledge to anyone who has ever used a RAT or keylogger, because multiple threads in the past have publicly discussed them. Specifically, two of them are completely outdated, and with information/links provided will not work correctly. One of them isn't even an online method... so that's automatically useless. If I wanted to spread locally I would just drop infected USB's everywhere lol. The other two are arguably the most used & obvious methods of today. On top of all that, the seller ignored my message a few days ago to even acknowledge these issues, so that's why it's being post here... don't jump to conclusions. Overall, this guide is outdated, put together poorly, and nobody should bank on the supposed updates to come because there's no creativity involved when you're just compiling public methods.

Sad to hear that. The seller did the same to me except I'm not very sure if he's really ignoring it or not. I trust the seller of this thread. He has ALOT of awards coming from his previous account. I haven't bought the EBOOK yet because I'm waiting for his response. Once he responded to my PM, I'll see if I'm satisfied or not. If I do, I'll buy his EBOOK.

Besides, the seller also endorses his so called "large update". Coming soon I think. Anyway, I'll buy his EBOOK once he responded to my PM BUT I have to be satisfied and convinced.

All you need is a FUD stub, that is hard to get detected, that is all you need. So you will need a good reliable crypter, I'd suggest checking out this section [Cryptography and Encryption Market](#) and finding yourself a reliable crypter with good support and no current issues to ensure a successful infection rate. make sure you browse through each comment on the thread to make sure you buy a nice and very FUD crypter.

(Jul 9, 2015 07:05 PM)dankmage56 Wrote: [\[CITE\]](#) do you use darkcomet or what?I'd highly suggest using OSC RAT, LumonsityLink, IM3, Nanocore.

They are paid RATs on Hackforums, but are extremely better then Darkcomet, as Darkcomet is old, unstable and very yucky.

The difference between V1 and V2 is.

V2 is more advanced, more informational, and includes more methods and a extra section.

V1 is more basic, and older version, and contains limited methods.

I offer these 2 packages because I want my customers to have a variety, as V2 is abit more expensive, so I offer V1 as a more cheaper package. ?

- Is your method capable of spreading via email to targeted people? If so, I wouldn't hesitate to purchase.

- Also, does is it work for all Rats, including the non-native ones?

- Can you guarantee 100s infections per day?

Thanks.

1. Yes my method is capable of spreading via email to targeted users.

2. It works with botnets, rats, and majority of all programs capable of spreading malware. Both native and non-native.

3. Yes I can guarantee you 100s infections per day.

This guide contains multiple methods of spreading. No stupid shit, as I've written this guide for the sole purpose of mass spreading. And has methods of targetting, exploits, gamers and worldwide and alot more methods to come, as I try new methods of spreadin, and I keep reports of my methods within this guide.

The discounts wont be available just yet, as there is more I have to do with this guide still. But I'll let future customers know about the discounts to come within the thread design.

Lol, chances are this is a saturated method. How can we be sure it isn't? You provide no examples so its like buying lottery tickets, you don't know what method you are purchasing and just a bunch of vouches isn't even good evidence that it works. Id like more information if that is possible, just a bit curious....

And there is also +3 methods (4.99\$ package), which are not public.

Everything is explained good, sure not a waste of money.

Pros:

*Shows how to target

*You will 100% get victims

It advertises 100 infections a day, in theory, if you had a ransomware and spread it, there is a good chance you'll be making extreme money illegally using this ebook, hence generating illegal activity.

There are no refunds, say this doesn't work for you. Means he just took all that money from you? There has to be a refund policy put in place to insure no scamming.

I feel uncomfortable when all these people are showing off "slaves", which is illegal. And with a little bit of knowledge, you can be making good money with it, illegally.

Oh and you should consider providing what we need, like a crypter, or any investments before we begin "spreading".

All sales are final. This is not a scam? As there is too much information, content, concepts, methods, and effort put into this.

You feel uncomfortable because this is illegal? Why do you think I made this guide for in the first place? Infecting operating systems is illegal, this guide is for educational purposes.

And there are no other investments. I explain everything within the guide, and basically spoon feed you what you need.

Any questions, feel free to PM or post. ?

My guide is written in English. You can use Google Translator to convert to French so you can have more of an understanding.

Also to my customers, I've been writing V3, and will be offering an expert package for users who have experience spreading, but wish to know more concepts, and methods, how to infect routers, making silent exploits, and a lot more information. Will be completely revamped, and won't contain methods from V1 or V2.

Instantly spreading guide is going to shit on all the other terrible spreading guides HF has to offer. My knowledge is now yours, stay tuned people ?

I suggest not using Darkcomet, as it's old an unstable. I'd suggest LL.
And you can make money by mining, links, lockers, there information, sell slaves and alot more.

And how much a day is based on the amount of slaves you have, the more the better.

Advanced is 30 pages of spreading methods, same as within V1, but with an ENORMOUS amount of content covering everything, and is the biggest spreading guide on HF without no doubt. ?

Hi,

I just wanted to tell you that I really enjoyed the spreading video. I'm serious. I see a lot of people promoting their products, and services using professional, and business stereotypical videos, and this one shows more of a "real, 1 person". I feel like you're actually a person who wants to show your trueself, and communicate with the target audience.

10/10, great video, and with these vouches I'm sure that the product is good too.

This why I offer V1 & V2 for free when you purchase V3, so you have all my content.

V1 = basic spreading

V2 = advanced spreading

V3 = Expert spreading

Each version contains different methods, and are based on a complexity of methods, which is why I've chosen suitable names for each version.

With a CCNA: network technician, support engineer, network administrator, network designer, network engineer, and more.

You will need a CCNA to go for your CCNP, and a CCNP is way better, you'll get a bigger pay rise.

V1 is the 1st ever version of Instantly Spreading, the methods work, although it is slightly outdated (In terms of resources, although there are other alternatives), and that is why it's sold for so cheap.

I do plan on releasing a new version of Instantly Spreading hopefully around the start of February, while making a massive change up to Instantly Spreading guide.

As a customer, I would say it depends entirely on how much work you put into setting the stuff up. If you rush it, you most likely won't get a lot, but if you take your time, making it legit, you could get a ton.

New version of Instantly Spreading is looking good.

Will plan to release next month, currently working on designing a web interface for this project, solely, so I can give better support to buyers outside of HF.

And this is just an idea, I'm thinking with this next version I'll get afew hard copies printed & published out, so buyers can either order a physical copy or logical copy, and I'm thinking of doing this after I've finished with the web design.

I want to take this to the next level.

If you care for a customers opinion on this. I have no idea if Skyline would be willing to give the money back, but you should very easily be able to get some clients. Of course it depends on how much work you put into it, if you just quickly make some bad methods, then you'll prob only get 100 or 200 in a month, but if you work hard on it you can get thousands. Skyline has the best support I've ever come across, so don't worry about that, I've gotten so much help from him when it comes to ratting.

I give refunds if you cannot get slaves due to those given circumstances.

And you can get up to 100 - 1000 a day.

I am Curious to hear from people who have bought this guide how the RS07 spreading methods work and are they still working well or have they been saturated?

Also, are all the rs spreading methods included in v1? If not, which version? I am not interested in any other spreading methods, so it would be a waste of money for me spending more if its not necessary. Im only interested in RS spreading, so I'd like to see/hear some results. If I like what I see, I will buy this guide.

V1 & V3 include the RS spreading methods.

You can also take any method or informational content within this guide, and implement it within your Runescape spreading.

For example, there is a method on setting up doc exploits, you could also use that within your Runescape spreading. It just comes down to you as a spreader tho to use my methods, and educational content, so you can exile when spreading.

This product is really next level, the site looks professional as fuck. My only complaint would be the first picture on the site, I know it looks cool, the very technical background with blue lights, but it doesn't really have anything to do with the product. Just my opinion though.

It was an old background from a Instantly Spreading guide thread. I'll fix it up to something relating to my guide soon. I plan to change it into a picture slider, at the same size it's at now.

Still have a few things I need to get done, and out there.

For a youtube bot I'm assuming ?? vagex.com

I'm not quite sure about Vagex. I used their bot for a while and got like 3000 free views, but my videos barely seemed to get any of the views. I know authentichits.com is really good, however it is not free.

Also using your slaves for YT traffic is another good method once you've built up enough slaves.

Make sure your using a VPS that has no logs,
VPN or not, you can strip a UID use an IMM5 to monitor, and then reverse it to find all oncoming connections.

That's why you never buy hosting or a VPN from Hackforums. Always go with an offshore host, which isn't a reseller, and has physical access to the servers. So they can support and manage efficiently. Plus better performance aswell, and better for your money. As resellers tend to keep logs, and also depends on the countries laws as well.

Each guide was released around different time frames. And are all the different packages, based upon the complexity of information within them.

I'd recommend purchasing professional, as it will include all the guides, and all the information and methods you need to gain a large amount of infections. Plus will include future updates as well, and support. ?

that book is indeed very informative I bought few weeks ago vouch for the book nothing surprising however it is very detailed and user-friendly. Also, I hope to see some updates for ultimate users since it is not the cheapest book around but worth the money as a guide for times when you do not know what to do or how or by looking for ideas to do something whatever people do with their software. whatever you buy from this seller I am sure I get what is advertised.

Early last month i demanded for the updated version here. How true is this upgrading if you buy the latest version? i don't mean to annoy anyone.

i purchased V4 when it was the latest and now a new update has been released. I asked for this upgraded file but it wasn't given to me.

I WANT TO CLEARLY GET TO KNOW IF THIS FREE UPDATE IS REAL OR FAKE. If real then why was i ignored when i politely demanded for an updated package?

RAT: LL or IM4

Crypter: betacrypt (Offers private stubs)

VPN: anything besides a HF VPN. (Proxy.sh is good)

I will buy this product this weekend if I will recieve a payment. But I wonder if this would be useful for me when I dont currently have a crypter (yet).

Is the 07 rs method still working? I play osrs alot now more often and is mostly buying tgis because of that.

Thanks in advance.

It is indeed still working, and you don't NEED a crypter for most methods, however it is HIGHLY recommended. A crypter will do wonders for your success rate, almost everyone has some kind of AV and almost every single one will detect your rat.

You can go for a very cheap crypter, I think there's one for about 7 dollars, now it may not FUD, but it will still be a lot better than no crypter.

This is a cheap one

NOTE: I do not endorse this product in any way, I am simply linking it because it is the cheapest crypter I know of.

Looking forward in putting together a new version again, getting tired of seeing new spreading guides come into the market just to rip people off, so it really makes me want to push out a new update.

And I'm hoping to release some free methods very soon, so stay tuned !

And I'm hoping to release some free methods very soon, so stay tuned ! Thanks again homie, this is why i purchased your professional plan, its great and very detailed, as well as the other guides. Great for someone like me that wants to learn things on their own and for my low skill level. I noticed you have someone else helping you out now which is great, and your help and customer service is on point. The guides were shorter than i thought they would be (like a novel in size in total) which was a bit disappointing, but a decent amount as well as quality of material was available even though i didnt understand them all. I was a bit skeptical at first to throw down \$50, and to be honest 75% of it was worth it but the other 25% was for support and updates but i guess thats business, and even so being if you get the cheaper guides your going to get what you pay for. ?

What an awesome and honest review, thank you very much for your opinion :) I've been a customer for quite a while and I completely agree with you, wasn't sure about spending the 50 dollars since most ebooks are terrible. However I had seen Skyline around and I could see, that he knew what he was talking about. Not only did this guide help a ton on security and made my results so much better, but the best thing was honestly Skylines support. I have maybe 50 pms sent to Skyline, each one with atleast 1 question, half of them pretty dumb, and he answered every single one. I'm proud to be part of that support now :)

Really depends on what method you use, it can be anything from 5 min to 1 hour. Most methods have a quick and easy setup though. I got almost 100 installs on the first day with just 1 method from the newest version. (V5)

Believe I haven't mention some certain updates I've currently implemented to this project over the past few weeks.

- Integrated tawk.to to the website for live chat support
- Added support member(s)
- Created/Embed Twitter @instantlyspread
- Created www.instantlyspreading.com/buy.php for purchasing
- Added Perfect Money as a accepted payment method
- Stop mixed content blocking some parts of the site (SSL)

Twixles - May 16, 2016, 3:00 pm

We are working on updating methods of older versions of Instantly Spreading, as well as releasing a free version. This should be done towards the end of the week, stay tuned!

#Skyline - May 17, 2016, 5:54 pm

All items have been delivered to those who have purchased.

And I shall be working on releasing a free version of Instantly Spreading which should be released towards the end of the week.

Remember if you have any questions or need support, please contact us.

Twixles - May 20, 2016, 8:44 am

Free verison is complete, we are just awaiting new GFX for our service before we go ahead and release the free verison.

I'm getting really pissed with what is happening here... I've never experienced what you are trying to do with me mate. Don't ever ask me to pay \$5 for download link because the one you sent me does not work anymore. Send me a new download link and you're asking me to pay a fee of \$5 isn't that a scam or are you just kidding me?

<https://instantlyspreading.com/faq.php>

We get a large quantity of customers asking us for there items again. It should be your responsibility to back up your own data... We don't backup your purchases...

This is why we charge a \$5 service fee, because once paid, I know you as a buyer will never lose your item again, because of what I'm making you do.

Please find these policies understandable.

Twixles - June 30, 2016, 6:19 pm

Just to make sure there isn't any confusion regarding Martigo's complaints. He recieved a download link, then he downloaded it and it was all good. However, he then deleted it for some reason, then wanted the link again, but it was expired. (The downloads automatically gets deleted after a while) However, we don't believe it's our responsibility to keep backups of your download and make it ready for you to download whenever you mess up. So we require a small fee to make sure we don't get 10 requests per week asking us for a new download, since it's quite a tedious task to prepare a download link.

Exactly. And users need to be more aware that we don't take responsibility with what you do with our guide, nor do we take responsibility if you misplace or modify or delete our guide. That's why we charge a small fee.

use of a crypter.

That's said within our free methods which is old content and not updated, thank you for pointing it

out. I shall be editing it however.

Just ensure to use a unique video which isn't hasn't been uploaded to Youtube. Due to security purposes, Youtube will remove videos which have already been uploaded to Youtube.

Does your guide include methods to spread in a internet cafe ? Internet cafe as in a big place with dozens of asians playing LoL. In the internet cafe everytime the computer restarts its reset to a clean state of the main pc. I would like to be spread and maybe do some keylogging remotely. Thanks for answering and keen to purchase your guide.

Our methods can be used to spread to devices at an internet cafe, even through LAN.

Also the internet cafe would be using virtualized OS templates that reset to the default configuration everytime the PC is restarted. So you'll need to infect the device deploying the OS's (Mostly likely the admin PC) so you can configure each template to run your stub each time a PC starts within the cafe.

We have released a majority of updates and different versions to our guide. It is private, as our latest versions cannot be found anywhere.

We provide free & premium content also.

We are the most successful spreading guide their is.

You can use byte crypter to make your stub FUD, yes.

However you'll need to compile and obfuscate the silent exploit yourself.

That's what will get me to buy this one. Also, there are automated methods as well right or? Just wondering.

Yes, it's older, and has been sold by multiple users within the marketplace.

Yes, we provide automated methods, targeted methods, and even methods to infect worldwide. We also provide support and lifetime upgrades if you purchase our professional version.

Thank you. I've actually owned the website for almost a year now, and has been going strong.

Also, seems your VPN has been successfully running for a long time now, and seems you're doing a very decent job running and managing your VPN service.

New customer policies will be announcement at the end of this month.

Basically if you lose access to your item, we're not taking any responsibility in regards to your actions or data, meaning you'll have to pay for your item again.

Also there will be a change to our new update coming out. As customers know, they'll receive their new update for free, however due to unforeseen circumstances current customers will not receive the newest version of our guide for free, as I do wish to keep the integrity of the newest version of our spreading guide. If you wish to receive the new update, you'll need to purchase it. I will however provide current customers a 50% discount to the newest version of our spreading guide.

Thanks, #Skyline.

Twixles - February 18, 2017, 6:17 am

Great for someone like me that wants to learn things on their own and for my low skill level. I noticed you have someone else helping you out now which is great, and your help and customer service is on point. The guides where shorter then i thought they would be (like a novel in size in total) which was a bit disappointing, but a decent amount as well as quality of material was available even though i didnt understand them all. I was a bit skeptical at first to throw down \$50, and to be honest 75% of it was worth it but the other 25% was for support and updates but i guess thats business, and even so being if you get the the cheaper guides your going to get what you pay for. (Apr 28, 2016 01:15 PM)CatNHat Wrote: [\[CITE\]](#) Thanks again homie, this is why i purchased your professional plan, its great and very detailed, as well as the other guides. Great for someone like me that wants to learn things on their own and for my low skill level. I noticed you have someone else helping you out now which is great, and your help and customer service is on point. The guides where shorter then i thought they would be (like a novel in size in total) which was a bit disappointing, but a decent amount as well as quality of material was available even though i didnt understand them all. I was a bit skeptical at first to throw down \$50, and to be honest 75% of it was worth it but the other 25% was for support and updates but i guess thats business, and even so being if you get the the cheaper guides your going to get what you pay for. ~My Review~

After spending money on the Professional guide, I can say it was money proper well spent.

This \$50 will NO WAY NO HOW get you 1,000 bots/slaves a day, but the knowledge contained within the guides are priceless. Some of the methods I knew, but I learned a ton.

Overall, I don't regret spending the \$50, and I'm looking forward to the new updates coming (hopefully) soon.

Thanks Sky,

Hi. I am new here. I would like to know if I can ask a few questions. I work alongside approx 20 computers, I am interested in a bot army. I am just learning about rubber duckie, and I thought, if you wanted to assist me, in the how to element, I will do the leg work.

Then we will have a shared bot army of just 20, but at least its a start and it can grow.

I would be very grateful for any correspondence and communications.

Kind regards.
