Thread: [\[Tutorial\] \[How To Be Anonymous Part 1\] Computer Setup](#)

Anon.BTC - June 8, 2015, 10:28 am

Hello HF.

My name is Anon.BTC. I'm here to share with you some secrets about Blackhat money making methods and privacy.

In this tutorials i will show you how to be anonymous on Internet. Will share with you all my secrets. Soo lets start with the 1st part of this tutorials.

Computer Setup [Part 1 - Programs]

Full List Of Programs You Will Need:

- Virtual Machine (VMware) - You can download it cracked from almost any torent site.
- VPN - Don't use free VPN. Always look for logless VPN. Don't Use dedicated VPN.
- Vip72 - You can buy it from vip72socks(.)net . It's Cheap.
- Ccleaner - You can download it cracked from almost any torent site.
- MAC Address Changer (TMAC v6) - Google it
- HDD Changer (PBDownForce) - Google it
- Mozzila - Google it
- TOR - Google it
- Windows 7 .iso - Download from any torent site.

If you have everything from this list you are able to start making your Setup.

Computer Setup [Part 2 - Preparing Your OS]

1. You need to chose what OS you wanna. I personally prefer Linux Ubnuty. But Windows 7 is good too.
2. Before you install your OS make sure you format all of your hard disk. Don't leave any files.
3. Install your clean copy of Windows/Linux.

Computer Setup [Part 3 - Programs you need on your PC]

1. After you install your OS go ahead and install win-rar.
2. After that you need to install VMware.

Thats all programs you need to have on your clean windows. Of course if you wanna to use your PC for WhiteHat activities you can install Mozzila,Skype and etc.

Computer Setup [Part 4 - VMware]

1. Now go ahead and open VMware. You will see a screen to guide you how to install your OS. Follow it and use Windows7.iso to install it.

WHY?: VMware is virtual machine with his own HDD address. That way no one will ever detect what are you doing there and connect it with your real PC.

+ If something happened you can just delete the OS on your VMware and you are clean.

2. Login to your new OS on VM and install all programs from the list.

Computer Setup [Part 5 - How to hide your IP and PC]

1. Go to Ccleaner and start it on the VM. Clean everything.
 2. Go to HDD Changer and click "Spoof HDD" - restart the VM.
 3. After you restart it go to your VPN and start it up.
 4. After you have your VPN go to Vip72 and chose what SOCKS you like. And connect it.
REMEMBER: Always open VPN 1st and vip72 after that. VPN -> Vip72 -> Browser
 5. After you change your IP with vpn and socks5 see from where is your ip. E.g: Russia
 6. Open TMac v6. Click on your internet connection and click "random mac address" and start looking for Russian Mac Address.
 7. Make a research and find what is the time on Russia now. And change it. (Im talking about the BIOS Clock on your VM)
- Now go to check2ip(.)com thro TOR and see if everything is fine.

Computer Setup [Part 6 - Browser]

1. Go to Mozzila and type about:config in the URL bar.

After that change all of this:

Code geo.enabled = false

geo.wifi.uri = [leave blank]

network.http.accept.default = text/html,application/xhtml+xml,application/xml;q=0.9,*/*;q=0.8

network.http.use-cache = false

network.http.keep-alive.timeout = 600

network.http.max-persistent-connections-per-proxy = 16

network.proxy.socks_remote_dns = true

network.cookie.lifetimePolicy = 2

network.http.sendRefererHeader = 0

network.http.sendSecureXSiteReferrer = false

network.protocol-handler.external = false [set the default and all the subsettings to false]

network.protocol-handler.warn-external = true [set the default and all the subsettings to true]

network.http.pipelining = true

network.http.pipelining.maxrequests = 8

network.http.proxy.keep-alive = true

network.http.proxy.pipelining = true

network.prefetch-next = false

browser.cache.disk.enable = false

browser.cache.offline.enable = false

browser.sessionstore.privacy_level = 2

browser.sessionhistory.max_entries = 2

browser.display.use_document_fonts = 0

intl.charsetmenu.browser.cache = ISO-8859-9, windows-1252, windows-1251, ISO-8859-1, UTF-8

dom.storage.enabled = false

extensions.blocklist.enabled = false

2. Now you are able to go anywhere, do everything and never be caught.

Some TIPS/Advices

1. Never/ever let java open on your browser.
2. If you are doing any blackhat activities which involve cookies save make new PC on VMware.
3. Everytime before and after using the VM use Ccleaner.
4. Don't download any images from deepweb.
5. Trust no one.

Thanks for reading my tutorial. I spend 1 hour making it. It will be nice if you don't copy it. It's only for HF from Anon.BTC ?

AnonymousPlayer - June 8, 2015, 11:58 am

Looks like a good tutorial. I appreciate the contribution from a new user, somebody who's giving without asking.

I've given you some positive rep, hope it helps. ?

ret20 - June 8, 2015, 6:06 pm

lol this tutorial has a lot of problems

Yertle - June 8, 2015, 6:08 pm

Too bad you can't go in detail with blackhat :)

ret20 - June 8, 2015, 6:10 pm

you should look into using wokfi's - they are very good as part of an anonymity setup

SIM-2373217 - June 8, 2015, 9:32 pm

skid right here writing the tutorial lol

#Skyline - June 9, 2015, 12:12 am

User recommends torrents and crack products for this tutorial.

I wouldn't suggest.

Anon.BTC - June 9, 2015, 8:52 am

1. Sorry about all mistakes. My main language is not English.
 2. I recommend torrents and cracked products because >70% of the people here in HF are not able to pay full price for all programs and stuff.
 3. Yeah its bad i cant go into details about blackhat methods and etc.
- ?

Excaahhh - June 10, 2015, 7:32 am

Thanks for the tutorial OP, Looking forward for part 2...

eklat92i - June 10, 2015, 7:55 am

Thanks for the tutorial OP , working great !

easyway - June 12, 2015, 6:59 pm

very interesting tutorial i will try that

avantus - June 28, 2015, 9:59 pm

Hello Mr. Anon BTC

I would like to express my deepest thanx for ur extra-ordinary tutorial Part 1 how to be anonymous.

Is there any new part coming soon as part 2 ???

thanx

souto - June 29, 2015, 9:39 am

Thanks for the tutorial, going to see some things...

The_Defiant_One - June 29, 2015, 11:08 am

There are some good fundamentals here. Thanks for sharing!

The_Messenger - June 29, 2015, 12:29 pm

I havent been doing even 30% of this,
thanks for this usefull short and easy guide

nadya - June 29, 2015, 1:37 pm

let me try this sounds good tutorial

Norton AntiVirus - June 29, 2015, 11:36 pm

Nice Tut thanks for the post!

TheSuspect - June 30, 2015, 6:54 am

I guess there won't be a part 2 because his account got closed ?

jakob305 - July 5, 2015, 8:03 am

are u 100% safe with this?

ruckus_maker - September 25, 2015, 1:37 pm

Thanks for the tutorial, dude. This is something I'll have to research further. I certainly would like to be as invisible as possible.

klodtn - February 10, 2019, 4:11 am

Dear Anon.BTC

Thank you for this tutorial and your time.

Workaholic - February 20, 2019, 1:03 am

Thank you 4 that. I will try it. Look like some many work. Keep going.

PhreakyMF - February 20, 2019, 8:46 am

very well done. thanks for that ?

Totes Mcgoats - February 20, 2019, 10:48 am

Thanks OP, really appreciate this stuff!
