Font Display App

Hey guys, this is my first release in a while, so let me tell you a bit about this program...

I found myself needing to find a font that worked well with my new theme I was developing, so I created an app that showed me all the system fonts, and what a defined string looked like in that font with different styles.

If highlighted red, it means that the font style is not available for that particular font.

UPDATE: Add the following line in 'Sub MakeFontList' under the first line that says 'ListView1.Items.Clear()', so that the listview resizes with the font size changes.

Code ListView1.Font = New Font(ListView1.Font.FontFamily, TrackBar1.Value - 1, FontStyle.Regular)

Virus scan:

<https://www.virustotal.com/en/file/a9a7028d3688bec60797eec432e559844dbde771d20ab3cef1592af41f0dfdd1/analysis/1433817970/>

Here is the download link to the source :)

[Download from Mediafire](#)

For more fonts try [DaFont](#). This is where I get all my fonts, but for the end user to see the font, they must also have the font installed on their PC. I will work on integrating fonts into apps on design time.

Thanks guys,

Enjoy!

Posting to look at this later.

Thanks OP.

Something unique. I like it.

Fudster - June 8, 2015, 7:59 pm

Nice OP. Do you think you could add a option to include other folders? (custom fonts)

nuk - June 8, 2015, 9:48 pm

Something different, and USEFUL (for once), in the .NET section! Great work & share OP! Thanks for this ;)

Hey bro,

If the font is installed on the system, it should pick it up. I just installed the barcode font, and the program picked it up. What are you looking to do? Open a font and preview it like windows does?

SaketSaket - June 9, 2015, 1:13 pm

Nice tiny utility for developers ;)
