Thread: [Computer screen not filling monitor screen](#)

Blakey - June 10, 2015, 9:28 pm

I've tried pretty much everything I can think of to fix this.. Used CCC tried in just windows settings adjusting resolution.. And the screen won't fit..

Thanks

Niko - June 10, 2015, 10:32 pm

1. Try all resolutions (Pc)
2. Try changing the aspect ratio on monitor
3. Try changing both

datguy.dev - June 10, 2015, 11:05 pm

Try adjusting the 'overscan' setting in whatever you use to adjust your graphics settings (AMD/Nvidia).

Canonsx130 - June 10, 2015, 11:18 pm

Did you do something for this to happen? Any updates, new drivers or anything? Are you using a graphics card?

Blakey - June 10, 2015, 11:47 pm

I've tried everything. It's just happened today. Last night I switched my computer up, think there was a new update.. then this morning I've turned it back on and the screen has gone A LOT smaller.

It's frustrating, if anyone thinks they've got a solution or can help. Please Please PM me your skype and I'll add you.

Do you know what kind of update it was? Check if you have any system restore to before this update and try restoring to see if it works. Also, are you using a graphics card?

No idea, honestly just turned it off and then turned my TV screen off (Use HDMI connected to my tower)

I can't restore to an earlier time as I don't create back ups :\

Yes I am using graphics card.

Yes I am using graphics card.

Take a pic of your screen (on the desktop) so we can get an idea of how "small" your talking about.
