Vouch for Nex and his Products .

BotMarket - June 11, 2015, 6:08 pm

Is this just a password checker or does it use a exploit to actually crack the account?

Atom™ - June 11, 2015, 6:32 pm

Vouch for my friend Nex here.

Knows what he's doing!

Good luck with sales,
?

DamienVC - June 12, 2015, 8:54 am

Running this project with Nex right now, working on getting more crackers added.

This tool crack account with combo list or just on a selected account that you want to crack ?

DamienVC - June 13, 2015, 3:41 am

It uses exploits in the connection to grant unlimited trials. Proxy is optional. It has capture on many modules - captures IG followers, posts, following and more stats.

Yes it does not crash at any limits

As much as your PC can hold.

It also runs on VPS too.

Ditto the above. If it can exploit all of them platforms it would be quiet amazing for a £30 tool.

necromanhcer - June 13, 2015, 6:04 pm

Looking into this for instagram. So you're saying you have an exploit for each module and this will automatically bypass everything and get me the password?

No, this site cannot crack wordpress logins but we will consider it as a suggestion and add it in the future. As you know, we already have 7 more modules ready, but we're going to add another 25 at its v1.1 update.

It can be targeted as well as a list checker by some methods, furthermore, it has a unique capture feature than other crackers.

Eg. It can catch the Instagram values for Posts, Followers and Following once cracked.

Darkorbit GamerZ - June 14, 2015, 10:13 pm

I buy this tool now if you can add a account cracker (randomly) with email pass combo list like Vcrack

Here he juste have to target a single account so it's good but add a randomly cracker option.

Thx my friends

If you want to target a single account, use this:

<http://textmechanic.com/Add-Prefix-Suffix-to-Text.html>

Copypaste the password list (open via Notepad or if its big via Notepad+) and prefix it with "yourtarget@emailsite.com:" (without the double quotes)

Yes it uses exploits, and bypasses all type of verifications.

I cannot tell how much time it would take but it runs over 100-1000 combinations per second and can be even faster since it has an infinite thread limit.

Username:Password combolist format.

Use the prefix/suffix tool and prefix it with the username you want to crack and it will be preloaded to the list, then use the combolist.

No, it works with combo list, they provide you with a 15mil password list, and 20k most used
passwords. You can also download more from the internet.

DamienVC - June 26, 2015, 7:01 am

Combolist cracking based on previous logins is the most profitable. You can resell cracked
accounts, and even if you stumble upon jackpots (I've stumbled across PSN accs with like \$400
balance and 40-50 games) which can easily be resold for a HUGE profit considering you just ran
combolists.

Also it works very fast, faster than any other cracker on the group.

This is an official product from the side of Debug, an official group and it will not disappoint anyone.

I didn't mean to flame, and I'm being paid to have vCRACK in my signature I don't support it. Don't attack me. I'm saying that the section where you have 'exclusive features' aren't really exclusive features.

+ i would request to have a user and pass list rather than combo, or add a combo list creator if you can!

It would be nice if the "Log" tab would scroll with the checker so you don't need to scroll down yourself only for it to update and put you back at the start every time.

Would love to see this video of this program working. Beware of Damian you guys. If you don't like his products he will fake REP you and claim that you "chargeback" even though that never happened. User gets all his rep from bitcoin giveaways and sells programs that are fake as shit and don't work.

Once you can show me a video of iGram or this program functioning correctly I will edit/remove this post, but that will never happen.

Many of users have vouched for this of it working, and I indeed have tested myself with it working. Its odd that its working for some users and not others but we believe to find the bug and it should be fixed within the next 12 hours.

Thanks for confirming. I trust you nex. Not trying to sales trash you just find it fishy that the second program in a row I purchase from Damian ends up not functioning (at all). Then on top of that he accuses me of charging back?

So it has unlimited tries even if I have no proxylist?

I don't quite get it, it seems amazing enlighten me.

So I can try 1 million+ combinations from a big wordlist with unlimited tries without getting locked out?

So for example if I would crack someones IG I would create a specified wordlist for this user and then the wordlist would contain about 100 000 passwords.

Let's say the persons password is in this list, would I get access to the account?

If this is the case I will:

DEFINATLY BUY IT! please respond!

Why does so many people have problems with this software?

Will i have problems even if i:

Don't use proxies, my entire connection is filtered through a VPN (So no silly proxy error's)

If the login API doesnt have a IPban after 5-10 tries, then you can use a single IP.

Yes it works on Win7

If you aren't retarded, you should use a PROXY list other than a single VPN that will be banned after 5-10 more logins

I'm quite sure Facebook, IG and most of those other have a IP ban after 5 tries, so you mentioned before in the thread that it has exploits that enables you unlimited tries, but you still need a proxylist to bypass the IP ban?

Ok I reinstalled and I'm still getting the same issue so let me clarify:

I download, open in WINrar

Netsel opens for about 3-6 seconds then closes

Winrar prompts me with new files have been created add to archive?

If I say yes a log appears with this message in it "7/29/2015 5:13:41 PM : 0x0E"

All AV are off, and I can't run as admin from winrar, and if i transfer it to the desktop and run as admin nothing happens.

Thanks Again

There is a browse button near the "Accounts" part.

You need to bring in private combos from DB leaks (most efficient)

Okay, that still doesn't answer my question. I made a small test combo list with my actual password and username in it, and it never cracked it. Just kept saying "checking" > "failed" in the log tab until it got to the end of the 10 line-long list..... ie it didnt work at all.

I've tried it 3 times now with the same list to try and see it successfully do it. Nothing. Very skeptical about this now. ?

No, dont use a fucking VPN. VPN is as worse as using your own IP. You need proxies if you want to do more than 5+ login attempts

HobsonsChoice - August 7, 2015, 11:45 am

Warning: I bought this software thinking it was a cracker. It is advertised as one and looks like one but it is just an account checker for each site. You just enter a combo list and it checks each one. Be sure you want an account checker if you are going to buy this. Just my experience.

EDIT: I asked the coder of the plugin for some support and he started calling me retarded. Definitely deal with caution.

That's the reason why I never want to add "targeted" or "dictionary" attacks to DebugCracker nor release any standalone crackers.

It doesn't "crack" anything.. It just checks whether your user:pass combo is correct for that user.

What do you mean?

As you can see standalone crackers for Facebook, Twitter, Instagram are being sold for \$15 a piece.

Then a cracker with all three of those are being sold for \$20 a piece

And we have 26~ modules and the price is just \$30 lifetime. That means like \$1.15 per module.

Furthermore, it does have Capture for select sites (eg. PSN Games, Origin Games, Instagram followers etc)

We are currently having PP problems so by the time the PayPal option returns, the sticky will as well ?

I had a perfect runescape account checker before there recent change in links/post data.. it doesn't require DBC, you get 2 attempts per proxy before recaptcha block, unless the proxy is blacklisted or been previously used within the last 24 hours by another user, otherwise it's 2 attempts per proxy.. in which case you just skip proxy if recaptcha, it's pretty simple to read the SRC & detect if recaptcha is set or not.

Now I asked: or u have to fix it or I want a refund, and they both seem to ignore me.

Will edit this post if something happens.

Vouch for DebugCracker, 25~ modules indeed

DamienVC - October 4, 2015, 2:52 pm

Pretty good cracker, dont hesitate to buy

DamienVC - October 9, 2015, 7:38 pm

Still running as one of the best multicrackers, dont hesitate to purchase!

Question:

1. How long have this service been up in total?
2. If i were to buy the lifetime license would i be able to get a personal plugin (not public ones) created for me? It's not complex or advanced, only login = true

Thanks in advance if you wish you can reply me via PM also.

Quick question, so you need combo lists to crack the accounts, right ?

I know it sounds dumb, but reading the first couple of pages I couldn't find a clear answer

Yeah it needs combo lists.

You can make your own or get your own.

I asked damian, if the runescape module is not working will I get a refund?

He said yes, I purchased it and ofcourse the runescape module didn't work.

Then I asked both nex and damian for a refund but they are ignoring me...

So I guess they scammed me? :o

Releasing a short update immediately.

Cleared out all machine locks and sent a fresh update!

1. 4 months since now
2. Depends on the anti bruteforce measures / captcha / capture requirement etc of the target

DamienVC - *October 30, 2015, 11:52 pm*

Main modules still working, and running with full capture function.

Let me know if you want to purchase

Interested in this and probably going to buy this within a few days, but why is this in the 'eBook bazaar'?
