Thread: [Hacking IPB forum](#)

Jaysus- - June 13, 2015, 5:52 am

Hello,

I need to "hack" an IPB forum so I can see threads/post made by admin which are invisible to any other member or visitor.

If anybody can point me in the right direction regarding where to start learning and what tools I need, I would really appreciate it.

Thanks!

PS: If anybody is already able to do it, I'm even willing to pay (good) even before the job is done.

Just want to warn you, that you'll find alot scammers here who will ask you money first, do not pay anything upfront without using a escrow service.

As for IPB hacking, check which version they are using and if there is any exploit available.

Thanks for the info, I've already been in some other forums and found a lot of fake reviews and scams (what the heck is wrong?).

Anyway I do not know how to find the IPB version, since I tried to search on all the site and I couldn't find any relevant info, but by searching on google images I would point out that the forum is probably running on IPB 4.0 , since the forum was made recently (not sure tho).

And I can't find exploits for this version, regarding older stuff I've found pretty much everything but it's old and useless now.

I need a way to "hack", as I stated on the first post, since all I need is one hidden message (or thread), that was made by the admin. I need to find it somehow.
