Thread: [Apps show in recent apps one by one](#)

Dr1ps - June 14, 2015, 2:02 pm

For some reason, not all of the running apps are shown in the recent apps menu. They appear one by one, and what I mean by that is that I open the recent apps menu, I clear it and it's empty. Then, I need to open the recent apps menu again to see the next running app.

I have a G2 with Lollipop

Accoy - June 15, 2015, 7:31 am

If every app is doing this then there is a problem. If you clear all recent apps, then find a "package installer" or something like that in recent apps, I get that as well.

Dr1ps - June 15, 2015, 9:07 am

It happens for every app, it just shows them one by one

Here's your solution to Google's shitty developers who can't properly integrate backgrounding and multi-tasking into one feature.

Eh I'm not really into that rooting stuff, but glad I'm not the only one having issues with it :P

Well, it's your call. There's likely a solution to what you're experiencing, but I can't force you to root.

I can walk you through it should you need any assistance.
