Thread: [\[Janus\] SQLi challenge #16](#)

JaNuS18 - June 15, 2015, 8:31 am

~ Tasks ~

- display version with your nick name, database and user
- display list of databases with maximum and minimum records found among all tables within each database

~ Target ~

aHR0cDovL3d3dy5jbmN0LnRn

(Base64 decode it using online decoder like <https://www.base64decode.org/>)

~ Proof ~

~ Rules ~

- use union select (GET)
- you can have max 2 SELECT statements in your complete syntax (plus additional one used in starting UNION SELECT)
- you may not use any local variable or command LIMIT or SUBSTRING_INDEX
- your injection should work without knowing anything about databases/tables on that site
- don't ask for hints or solution

Post your syntax to <https://privnote.com> (it is automatically destroyed after reading) and send me link to PM

Let's SQL knowledge be with you ?

Well it require some thinking ?

Hard will be my next challenge #17 with same task but with only one SELECT allowed (that one in combination with UNION) ?

OK

P.S.

That is how I see your picture
