Thread: [releasing batch package](#)

sureshsuri - June 16, 2015, 8:00 am

i learnt batch script from our forum and i decided to make use of my knowledge so i coded in batch script and made package with much pain and i want to show to hf today

what, which and why this package?

when ever we format our pcs we need to download or copy or get many softwares like ms office, winrar, pdf reader etc so i decided to make package and i almost done so now iam releasing snaps of my package i dont know this package is useful to ppl so please comment about that
BIG DOUBT!

iam used all 3rd party softwares here so will iam get any problem with that? if yes i will just stop coding so please suggest me about that

Is there ANY reason you used an installer maker? The ONLY reason you should use an installed application (at all) is if you need to release updates and your application is too large to be conveniently downloaded all at once, then and thus using separate files for updates.

b00st3d - June 16, 2015, 5:02 pm

Lets see some code here it looks nice on the outside but I'm not sure what your trying to accomplish here. If you want feedback then we need something to give feedback on...I'm bored very few HQ projects have come through the forums recently.

annikk.exe - June 17, 2015, 7:52 am

Please post the code here.

Also, if you are using 3rd party programs, it's nice to store them inside the .bat and then decompress them when they're required. You can do that using certutil - please see certutil /? for info.

Specifically, certutil /encode will give you an ASCII representation of a binary file, the ASCII can be stored in the batch file like regular text, and echoed to a file then decoded when required, using certutil /decode

my god, where have you been??

annikk.exe - June 17, 2015, 3:41 pm

On very important and srs cat business, ofc. :> I am srs cat. For srs stuff.

sinden - June 17, 2015, 3:44 pm

Cough Or you could use <https://ninite.com/> Cough

definetly i will post the code very soon but just give me feedback how is my app by seeing images

annikk.exe - June 18, 2015, 7:20 am

I haven't tried it. I like to read through the code first, so I can see what it's going to do. :>

If I give you feed back on your script by looking at pictures you have to review this movie that releases in 2016 based on the picture.

Looks a bit weak to me, the characterization is lacking and there's a lot of plot holes. Special effects are good though. :>

It needs more cats too, as I see none in the picture, and therefore must assume there are none in the movie.

'Palladium - June 21, 2015, 12:10 am

Let's not get off topic and let's be good cats.
