www.senuke.com

Price: \$67/month or \$127/month

For HF: Free

Instructions:

Step 1: Download [Wampserver](#)

Size :- 15.3 Mb

Step 2: Setup Wampserver(dont ask me dis, google)

Download [Senuke 6.36](#)

Virus Scan Spoiler ([Click to View](#))

4 because its a blackhat tool

Make a folder named senuke_scripts in the www folder, and inside tht put those files... It will work now..

Step 3: Copy and Paste content from senuke_scripts sumthing sumthing.rar inside this rar to C:\wamp\www

Step 4: run the senuke 6.36 setup

Step 5: Get any editor to edit

C:\windows\system32\drivers\etc\hosts
add this to your host file

Code:

127.0.0.1 www.senuke.com
127.0.0.1 senuke.com
Step 6: run senuke 6.36

Step 7:

User: demo
Pass: demo

You need to work on it though.. just run its modules one by one (disable autocaptcha it wont work) and it will signup to the various blogs, article sites etc, and then post your site, your articles there, it also spins (make variations) of article if u provide spin word... you can find various tutorials online for it but since you chnged hosts file so you can't open senuke website, if u want to open tuts on senuke webite, try google cache..

First configure ur host file correctly, den restart, den open ur browser and try to open senuke .com, the main site shuld not open... If it opens clear ur cache and cookies... After this run senuke, and enter demo in both fields..

zackry - June 18, 2010, 3:11 am

It works m using it too bro ...

Ok, test one thing, open cmd, type ping senuke.com, if u get reply from 127.0.0.1 all's fine, if u get it from some oder ip, ur hosts file didnt work correctly.. in that case u need to change some permissions .

First try ping then i'll edit the rest part :)

?

Edit:

if the second case happens download this :-

<http://www.mvps.org/winhelp2002/hosts.zip>

run the batch file in that as admin... if it says completed directly..

well, good if it says access denied... and then completed..

it didnt wrk.. u need to chng security settings ?

LUR3TryN3 - June 18, 2010, 4:07 am

Is it any spesial settings in wamp? And does it needs to run?

its not a wamp prblm.. to chek if wamp is running fine, open ur browser nd open the address 127.0.0.1, if wamp's default page opens ur wamp is good

Ok guys for the ones that can't verify the user and password, i got a solution!

In the hosts file, instead of writing <http://www.senuke.com>, write directly Code www.senuke.com, WITHOUT the http://
it fixed everything!

- 1-I installed and configured WAMP
- 2-I Copied the scripts to www folder
- 3-I edited my host files and i can't open senuke.com
- 4-Installed senuke
- 5-Restarted the pc
- 6- Used demo/demo and it prompt me saying invalid username pass.

Helpp

First configure your host file correctly, then restart, den open your browser and try to open senuke.com, the main site should not open...

If it opens clear your cache and cookies...

After this run senuke, and enter demo in both fields..
